LONG TERM OPERATING STABILITY AT FULL RATED VOLTAGE AND RATED TEMPERATURE EXTREMES IS ± 2% MAXIMUM.

Part Numbers:

The part numbers indicated in the table of values on page 385 are constructed as follows:

6	DP	-	2	-	103
Voltage Rating (in 100's of volts DCW)	Type Designation		Case Size		Cap. Value (2 sig. figs. & dec. mult.)

The above example calls for a .01 mfd. capacitor with a 600VDCW voltage rating. Case dimensions are shown in the table of values listing on page 385.

STEATITE TUBULAR CAPACITORS CP TYPE

.05 MFD.
600 V.D.C.
MAX. TEMP. 85° C
ELMENCO

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper 2¼″ long.

MINERAL OIL IMPREGNATION NON INDUCTIVE WINDING SYNTHETIC RESIN END SEALS — STEATITE CASE

The Steatite tube and baked synthetic resin end-fill provide a seal which rivals that of hermetically sealed construction, resulting in a dependability and longevity previously unequalled. Whether in operation or on the shelf, this paper tubular capacitor will maintain its excellent characteristics for years.

DIMENSIONS FOR CP TYPE CAPACITORS

	Max. Diameter	Max. Length
CP-1	23/64"	1-1/8"
CP-2	27/64"	1-3/8"
CP-3	31/64"	1-3/8"
CP-4	9/16"	1-5/8"
CP-5	3/4"	2"
CP-6	51/64"	2"
CP-7	1"	2-7/8"

Part numbers can be read as follows: First one or two numbers indicate voltage rating in hundreds of volts. CP indicates type of capacitor. Next number between the dashes indicates case size. Last three digits indicate capacity, the first two being significant figures and the last the decimal multiplier.

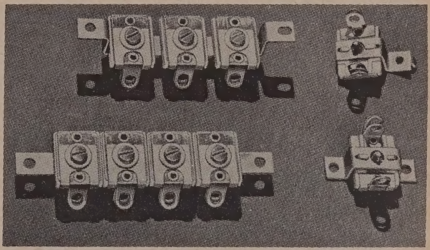
The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each list.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within ± 2%.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.



Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

TRIMMERS

El-Menco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

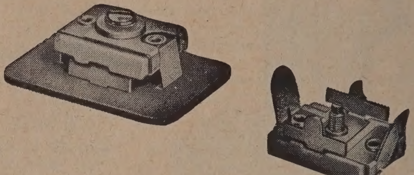
PRINTED CIRCUIT TRIMMERS



The Elmenco Type 46 trimmer series has been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped-in" the circuit and firmly held until soldered.

This printed circuit trimmer, available at present only in the Type 46 style, is identified by the prefix letter "PC". All capacitance ranges listed for Type 46 are available, designated as part numbers PC460 through PC468.

CERAMIC DISC

MINIATURE GENERAL PURPOSE

Elmenco Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, Elmenco CCD units fill the bill with dependability and economy. The 'space-saving' size of Elmenco discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000VDCW (Type 3CCD) and 6000-VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

TEMPERATURE STABLE

This new ELMENCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to −55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ELMENCO capacitors. All units are marked "TS" for identification.

CERAMIC DISC — Temperature Compensating

TYPE CCTO

Elmenco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Elmenco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Elmenco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of —750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

the NEW Arcolytic® CAPACITOR LINE

The newest step in expansion of Arco to a "full-line" capacitor supplier is the opening of our electrolytic capacitor manufacturing plant. The same excellence of quality and service for which Arco has been known over the years may now be expected of the "Arcolytic" line.

The current "Arcolytic" line includes single and multiple section aluminum electrolytics in metal can tubular, wax-filled tubular, and twist prong styles. In addition to the standard tubular types, threaded mount and printed circuit designs are available. Motor start and non-polarized aluminum electrolytic capacitors are also in production. Use of premium grade ingredients plus careful process and quality control combine to provide an optimum product at competitive prices. Qualification samples are available on short notice.

Arcolytic features:

- **Extended shelf and operating life**
- **99.99% pure aluminum foil**
- **High temperature characteristics**
- **Excellent surge resistance**
- **Built and tested to meet EIA Specification RS-154**
- **Maximum operating temperature: 85° C.**

TYPE EK

Miniature Ceramic Cased Electrolytics

Astron Type EK ceramic cased subminiature electrolytics are small capacitors, designed for all industrial and commercial applications. Using a steatite case, they are second only to hermetically sealed metal cased units in moisture and humidity resistance. High capacity, low voltage and extremely small size are the features that make the Astron EK highly suitable for application in transistorized circuitry and miniature electronic instruments and equipment.

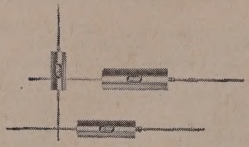
TYPE TES

Solid Electrolyte Tantalum Capacitors

ACTUAL SIZE



The Astron Type TES solid electrolyte tantalum capacitor is a subminiature metal cased, hermetically sealed unit, containing solid materials only. A new development in solid state technology allows the use of a semiconductor electrolyte, resulting in capacitors of improved reliability over a wide range of environmental conditions.

The tantalum oxide dielectric endows these capacitors with long shelf life and stability even at maximum rated temperature. The solid manganese dioxide electrolyte can never leak or corrode even if the seals are damaged or destroyed. The dissipation factor is low over the temperature range of −80°C. to +125°C. and the capacitor variation averages ±4% of the 25°C. value. TES capacitors are polar units. The case is the negative terminal. At 25°C., a maximum of 6% dissipation factor is allowed.

NOTES TO STANDARD RATINGS

I — TO ORDER: Simply write the partial catalog number indicated for the listed capacitance and add the listed WVDC.

Example:	Listed Capacitance	.0068
	Partial Catalog Number	TES-0068
	Listed WVDC	20
	Catalog (Order) Number	TES-0068-20

II — Ratings appearing in bold face are available in either ±20% or ±10% tolerance (with exception of 40M and 60M). All other ratings are available in 10% tolerance only. To designate 10% tolerance, add —10 to the catalog No. For example—TES-15M-20-10.

III — For insulating sleeve add (M) designation to catalog number: Example — TESM-15M-20.

IV — Higher capacities and voltages than those shown above will be available in the near future. Special ratings and tolerances are available on request.

METEOR* SUBMINIATURE PAPER CAPACITORS

For 125°C. Operation without voltage derating

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. **without voltage derating.**
- Exceptional capacitance stability, less than 5% change, over entire temperature range of —65°C. to +125°C. due to use of ASTRON-developed high-temperature impregnant X-250*.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25A.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

METALITE®

Metallized Paper Capacitors for 65°C. and 85°C. Operation

METALITE CAPACITORS

Feature:

- Ultra-compact sizes. Light weight. Ideal for miniaturization applications, and portable, mobile and airborne equipment.
- As much as 75% reduction in size over conventional paper-foil capacitors.
- Self-healing — the ability to withstand high dielectric stresses. METALITE capacitors can be subjected to momentary overvoltages and surges over and over again without danger of permanent failure.
- Temperature Range (Metal cased units) −65°C. to +85°C.; (cardboard cased Type ML) −55°C. to +65°C.
- Excellent RF characteristics. Low RF impedance due to small sizes and short current path. Low power factor.
- Wide variety of applications: RF and audio bypass circuits, noise suppression filters and systems, instruments, and various types of communication equipment where small size, light weight and the self-healing feature are especially desirable characteristics to meet specific circuit requirements.
- Interchangeability with standard paper-foil capacitor designs when operated within published ratings and circuit requirements.

METALITE® TYPE MQCF

85°C. Operation

ASTRON
METALITE
MQC—4—5

Glass-to-Metal Sealed SUBMINIATURE TUBULARS

- Smallest paper capacitor type available.
- Temperature Range —65°C. to +85°C.
- Non-inductively wound. Mineral wax impregnated and filled. Tinned, non-ferrous metal cases.
- Capacitor section grounded to case (Type MQC) with glass-to-metal terminal at one end. Available also with capacitor section insulated from case (Type MQCF) with glass-to-metal terminal at each end.
- Lead length 1¾″ minimum. Standard capacitance tolerance: ±20%.

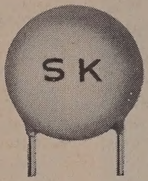
TEMPERATURE COMPENSATING CERAMIC CAPACITORS DISC (TCD)

SKOTTIE ELECTRONICS CORPORATION
PECKVILLE, PENNSYLVANIA
A WHOLLY-OWNED SUBSIDIARY
OF ASTRON CORPORATION



CHARACTERISTICS AND APPLICATIONS: Changes in ambient temperature affect the values of the various components which make up any receiver. This alters the exact frequency of resonance as is illustrated by some "drifty'" tuners which must be retuned after they have warmed up. It is possible to control this by introducing reactive components of such temperature characteristics and of such values as to offset the undesired changes.

Available Capacitance—temperature characteristics range from a change of plus 100 parts per million per degree centigrade (P100) to a negative change of 5600 parts per million (N5600).

ALL-PURPOSE CERAMIC CAPACITORS

SKOTTIE STYLE TXD all purpose ceramics provide the highest available capacitances at 250°C. in the smallest possible size. These capacitors exhibit less capacitance change with temperature than the limits specified in the EIA RS-198 specification for Z5U ceramics. This specification allows a maximum capacitance change of +22% and −56% along a temperature range of +10°C. to +85°C.

SKOTTIE STYLE TSD: Stable Capacitance Ceramics afford the best available linearity of capacitance with temperature for an extended temperature range. These units are notable for extremely low aging rate and excellent dielectric strength. The standard 500 V.D.C. working voltage rating is ultra conservative.

"BLUE BEAVER" ELECTROLYTIC TUBULARS

TYPE BBR

Electrolytic Capacitor
"BEAVER"

TYPE BR

BBR

Type BBR "BLUE BEAVERS," miniature versions of the BR, are especially popular for cramped space installations in television receivers, hearing aids, miniature radios and other small assemblies. They are hermetically sealed *in tubular aluminum containers with cardboard sleeve* and ideally suited to meet requirements in low voltage circuits. NEGATIVE TERMINAL IS GROUNDED TO CAN.

The anodes AND cathodes of all 150 volt BBR and BR units are ETCHED. This feature recommends these types for use with JUNCTION RECTIFIERS.

BR

Type BR is the compact unit in *aluminum can with cardboard outer sleeve.* Fits neatly into the cramped quarters, self-supported by rigid tinned copper leads. Larger sizes may be further supported by a metal strap. NEGATIVE TERMINAL IS GROUNDED TO CAN.

TEMPERATURE RANGE: to +85°C except 500 V. D.C., to +65°C.

CORNELL-DUBILIER

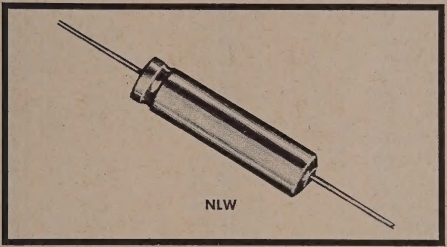
MINIATURIZED ELECTROLYTICS FOR TRANSISTORIZED AND PRINTED CIRCUITRY

"ELECTOMITE"® METAL-CASED



Type **NLW** is an aluminum foil capacitor, hermetically sealed into an ultra-small tubular aluminum can which is tightly fitted with an outer transparent plastic sleeve to insure freedom from "shorts" with adjacent components commonly found in compact assemblies. All terminal connections are securely *welded*. Despite their extremely small size, "Electomites" exhibit excellent electrical characteristics as well as rugged physical construction. Ideal for by-pass, filter and coupling applications in low-voltage, compact, miniaturized equipment.

TEMPERATURE RANGE: —20°C. to +85°C.
TOLERANCE: —10%, +150%

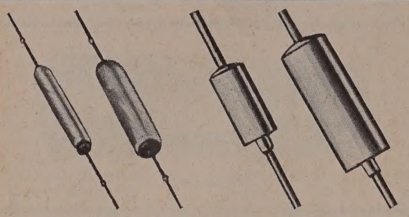
TANTALUM ELECTROLYTICS
TUBULAR FOIL & SOLID ELECTROLYTE



TAN (Foil) TY (Solid)

C-D type **TAN** is a tubular tantalum foil capacitor available in both etched and plain foil construction — polarized and non-polarized. Over 18 years of C-D research in tantalum capacitors have combined to produce a product of outstanding performance characteristics featuring low leakage current, excellent frequency characteristics, low power factor and extended service life. TAN capacitors are an ideal selection for critical applications where peak and long-term dependability is demanded.

The types listed here are only representative of a much wider range of units available in voltages from 0.5 to 150 working volts and in capacitances from 0.01 to 2000 Mfd. Inquiries are invited on ratings to meet specific needs.

"SOLITAN"®
SOLID ELECTROLYTE

CD type **TY** is a completely dry and hermetically sealed tantalum capacitor encased in a tubular metal case. Solitans contain no liquid electrolyte, residue or moisture of any kind. Remarkable stability of capacitance with time and temperature is thus possible. These are the smallest sized units yet developed in a tantalum capacitor, ⅛" in diameter and ¼" long. They are unmatched for the super-critical demands of computer, military and transistor circuitry. Many other ratings available upon request.

***SIZES:** a=⅛" Dia. x ¼" Lgth.
b=³⁄₁₆" Dia. x ⁷⁄₁₆" Lgth.

TEMPERATURE RANGE: −80°C. to +85°C.

TOLERANCE: ±20%

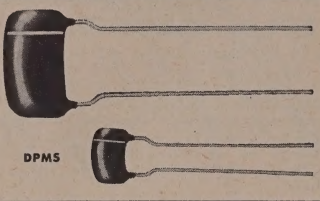
PAPER-MYLAR* DIELECTRIC SIDE-LEAD TUBULARS



Type **DPMS** is unique in that it is constructed with TWO dielectrics — Mylar* Polyester Film and a film of the very highest grade paper. The combination of the two thus provides the best features of both —

- ★ **HIGH TEMPERATURE OPERATION**
- ★ **HIGH INSULATION RESISTANCE**
- ★ **HIGH RELIABILITY**
- ★ **COMPACT — SPACE SAVING**
- ★ **IDEAL for Printed and Transistorized Circuitry**

"FIXFIL" impregnant, a C-D exclusive, assures stability of temperature characteristics. This solid thermosetting compound will not crack, soften or flow, even at maximum operating temperatures.

The **DPMS** has a "dipped" rock-hard casing which holds wire leads rigidly at fixed spacings. This tough, durable material has high humidity resistance, high dielectric strength against grounding and is unaffected by accidental contact with soldering iron. The crimped side-leads are space saving and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

CDE CORNELL-DUBILIER

MOLDED MYLAR* TUBULARS

CORNELL
DUBILIER
PM

PM

CDE type PM is a MYLAR* dielectric, high temperature, moisture resistant molded tubular capacitor. The thermoset molded case is tough and non-inflammable. The Mylar dielectric assures dependable operation under high humidity conditions, and it exhibits very high insulation resistance. Low RF impedance of these capacitors makes them ideal for all general bypass and coupling applications. High stability under changes in temperature makes these capacitors excellent replacements in tuned circuits.

TOLERANCE: ±10%

TEMPERATURE RANGE: —55°C to +130°C.

Derate voltage by 10% at 100°C; by 50% at 130°C. Full rating at 85°C.

CORNELL-DUBILIER

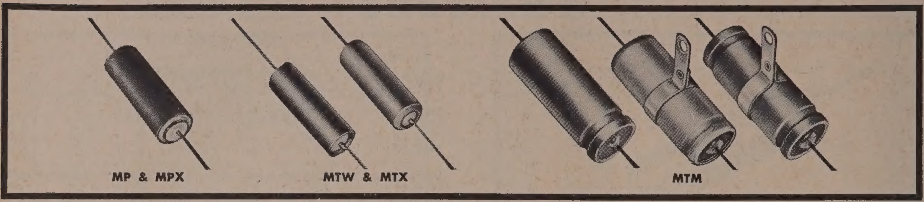
COMPACT METALIZED-PAPER CAPACITORS



Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on other style C-D metalized capacitors, write for Bulletins 142-3-4, 152 and 152-1, 185.

TEMPERATURE RANGE: —40°C to +70°C.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

"HIVOMIKE"†

High Voltage Molded Midget Mica Capacitors

Where high voltage, capacitance stability and high Q are important and units of the smallest size are requisite, the "HIVOMIKE" is ideal. Recommended for commercial—civilian and military uses under Characteristic "B." Voltage ratings actually exceed those required under MIL-C-5A.

Notes On Ordering 5R, 1R, 1DR Units

Standard capacity tolerance is 5% (or within 1 mmfd.—whichever is greater). Also available, on special order, in tolerance ratings of plus or minus 3%, add 10% to list prices, 2% add 15% to list prices and 1% add 25% to list prices. All types can also be supplied in plus or minus 10% and 20% tolerances at lower prices.

Types 1R, 1DR, and 5R "Silver-Mike" capacitors are designed for use in high Q electronic circuits where frequency stability and minimum loss must be maintained. Ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, tuning circuits and other similar applications.

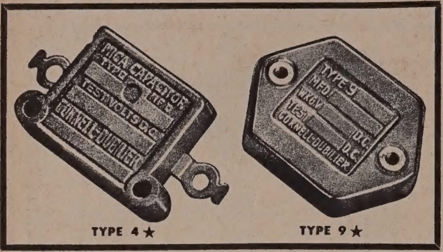
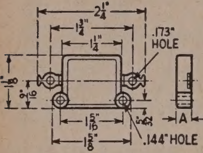
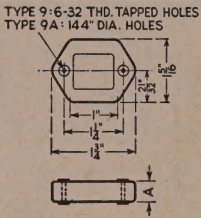
LOW-POWER MOLDED MICA







C-D types 4 and 9 are designed to meet applications in power amplifiers and low-power transmitters. Principally employed for grid and plate blocking and for r.f. by-pass. **Units are molded in a low-loss bakelite and have a special salt water immersion seal against humidity.**

In the type 9 the two terminals are tapped to receive mounting screws.

STANDARD TOLERANCE ±10%. Also available on order in plus or minus 5% and 2%. For capacity tolerance of: 5% add 15c to list prices; 2% add 40c to list prices.

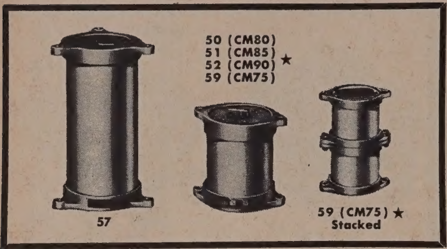
HIGH-POWER MICA CERAMIC-CASED



C-D Ceramic-Cased Capacitors are used in a variety of industrial electronic equipment and high-power transmitters. Built to handle high rf currents and withstand high-voltage stresses with a wide factor of safety. For grid, plate blocking, coupling, tank, and bypass applications—in induction heating, as high-frequency filters to obtain special wave shapes, in Loran circuits. Higher currents and voltages may be obtained with parallel or series combinations by selecting units of the proper capacity and rating, then bolting or strapping the terminal flanges together.

- ◆ CYLINDRICAL WHITE GLAZED, LOW-LOSS CERAMIC CASE
- ◆ VACUUM - IMPREGNATED STACK ASSEMBLY
- ◆ THE C-D SERIES SECTION MICA STACK
- ◆ FINEST INDIA RUBY MICA
- ◆ EACH SECTION INDIVIDUALLY TESTED FOR VOLTAGE AND CAPACITY
- ◆ CAST ALUMINUM END TERMINALS
- ◆ STACKS HELD UNDER HIGH PRESSURE
- ◆ SPECIAL LOW-LOSS FILLER

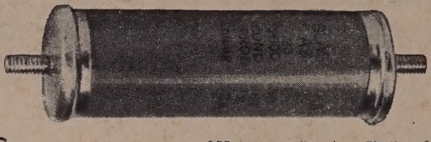
"Glassmike" Plasticon Capacitors



Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LSG type capacitors have Plasticon L film-silicone fluid impregnant. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

All 19/32 diameter Glassmikes are supplied with pigtail leads.

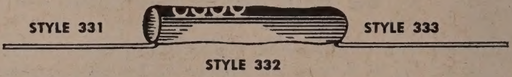
ERIE GENERAL PURPOSE CERAMICONS®

ERIE CERAMICONS are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

These capacitors meet performance specifications of EIA Standard No. RS—
198 FOR BOTH CLASS 1 AND CLASS 2



"GP"® GENERAL PURPOSE CERAMICONS

are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important—in other words for all receiver applications except in frequency determining circuits. Working voltage—500 volts D.C.

ERIE HIGH VOLTAGE DISC CERAMICONS®

Designed to employ the same basic diameters that have been standardized in 600 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses to assure conservative ratings in the high voltage line. They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

TEMPERATURE COMPENSATING CERAMICONS®

Erie Ceramicons are capacity-sensitive to temperature in varying pre-determined degrees, and because of this characteristic have found wide-spread application as temperature-compensating elements in circuits which must be frequency-stabilized over wide temperature ranges. They are also manufactured with practically no thermal sensitivity for use in applications requiring a capacitor whose value is not affected by temperature.

NPO TEMPERATURE COEFFICIENT CERAMICONS®

NPO Temperature Coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage — 600 volts D. C.

PARALLELING TC AND CAPACITIES

A wide range of capacitance values and temperature coefficients can be obtained by using Erie NPO capacitors in parallel with either N330 or N750 units. The following formulae are used in determining the capacitance of the various temperature compensating units that are required to obtain any desired temperature coefficient and capacitance:

1. $$\frac{\text{(Capacitance in MMF) (Temp. Coef. Required)}}{{}^{*}750} =$$

   Capacitance in MMF of the N750 unit to be used (use nearest standard capacitance value)

2. (Total Capacitance Required) minus the value found in step 1 = capacitance in MMF of the NPO unit to be used.
3. The total desired capacitance and temperature coefficient are obtained by connecting the units found in steps 1 and 2 in parallel.

*If an N330 unit is to be used in parallel with an NPO unit, substitute 330 for 750 in this equation.

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R.F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

ERIE CERAMICON® TRIMMERS

These trimmers have been well known for years for their stability under the most exacting conditions. The top of the base and underside of the titanium dioxide rotor are lapped optically flat, thus eliminating air space variations with temperature. Fired silver electrodes are applied to top of base and rotor, so that capacity is changed by varying the amount of overlap. Capacity change per degree of rotation is approximately constant, resulting in a smoothness of adjustment not possible with compression type trimmers, where the greater part of capacity change is concentrated close to one end of adjustment.

CORNING FUSION-SEALED FIXED CAPACITORS

It is generally recognized that the fused construction of the basic glass dielectric capacitative element used in Corning Glass Works' capacitors provides outstanding electrical performance under standard environmental conditions. To this basic element, now has been successfully added a glass encapsulation process with glass-to-metal seals at the leads. The resultant impenetrable unit insures reliable performance even in extremely severe environments, particularly those involving moisture or vibration.

Cornings' New CYF Capacitors are guaranteed to be four times better than MIL specs require on moisture resistance.

Here are two new capacitors that are practically indestructible.

CYF's will withstand MIL-STD 202A moisture conditions for over 1,000 hours with no sign of deterioration.

CYF10's and CYF15's do better on all counts for the specifications set forth in MIL-C-11272A.

CYF10's are available in 5-150 uuf at 500VDC and 160-240 uuf at 300VDC at 125°C.

CYF15's are available in 160-510 uuf at 500VDC and 560-1200 uuf at 300VDC at 125°C.

If you need high reliability and miniaturization, the CYF's — the only FUSION-SEALED Capacitors available — are worth looking into.

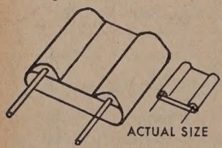
CORNING FIXED GLASS CAPACITORS...TYPE WL-4

Truly miniature fixed capacitors—



- ***Specially designed for printed circuits***
- ***Stable under high temperatures, moisture, long shelf life . . .***

COMPLETE RELIABILITY UNDER EXTREME CONDITIONS

Corning has developed these miniature glass dielectric capacitors for vertical mounting on printed circuit boards. These truly miniature fixed glass capacitors possess outstanding behavior characteristics that suggest use in critical applications and under high temperatures. If you're concerned with guided missile development, nuclear equipment, and other high reliability systems, these glass capacitors offer you much.

THE DIELECTRIC

A homogeneous, low-loss, uniformly produced continuous ribbon of glass; no foreign inclusions, no cracks, no imperfections to degrade the performance of the capacitor.

CONSTRUCTION

Only four simple elements: The glass dielectric; the metal foil plates; the wire terminal leads; and high temperature solder. After stacking the many layers of dielectric glass and metal foil plates, they are sealed together at a high temperature and pressure as an integral, rugged, monolithic unit. The wire leads are soldered directly to the foil plates with high temperature solder.

CHARACTERISTICS

Corning miniature fixed glass capacitors are manufactured to conform to the performance requirements of Military Specification MIL-C-11272A.

VOLTAGE RATINGS

The DC working voltage is a full 300 volts over the temperature range from —55 to +125°C.

CAPACITANCE

From 1 to 1,000 mmf.

CAPACITANCE TOLERANCE

Standard tolerance is ±10% or ±0.25 uuf whichever is greater. Also available as ±5%, ±2%, ±1%, but in no case less than ±0.25 mmf.

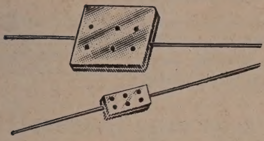
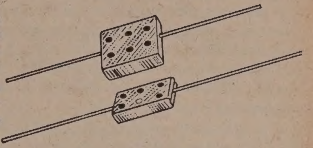
CORNING MINIATURE FIXED CAPACITORS



Developed through Corning research, these truly miniature fixed glass capacitors possess outstanding behavior characteristics that suggest use in critical applications and under high temperatures. If you're concerned with guided missile development, nuclear equipment, and other high reliability systems, these glass capacitors offer you much.



THE DIELECTRIC

A homogeneous, low-loss, uniformly produced continuous ribbon of glass; no foreign inclusions, no cracks, no imperfections to degrade the performance of the capacitor.

THE CASE

The glass case, used only to anchor the wire leads, is of the same glass composition as the dielectric; thus, the capacitor performance is a function only of the superior dielectric properties of the glass and not of any enclosing or potting material or impregnant.

CONSTRUCTION

Only three simple elements: The glass dielectric and case of identical glass composition; the metal foil plates; the wire terminal leads. After assembly, the many layers of dielectric glass, the metal foil plates, the glass case, and the wire leads are sealed together at a high temperature and pressure as an integral, rugged, monolithic unit. Thus, the properties of the capacitor are those of the closely controlled dielectric, and are not determined by assembly method or affected by any subsequent treatment.

CHARACTERISTICS

Corning Fixed Glass Dielectric Capacitors, Types CY10, CY15, CY20, and CY30, are designed and manufactured to conform to the requirements of Military Specification MIL-C-11272A.

STABILITY

Capacitance Drift — As defined by MIL-C-11272A is less than 0.1% or 0.1 uuf whichever is greater; it is very nearly zero and is generally within the accuracy of measurements.

Temperature Coefficient — Is fixed and therefore predictable and retraceable. It is within the limits of +140 ± 25 ppm/°C. as defined by MIL-C-11272A from −55°C. to +85°C. and referred to +25°C. (See figures 1 and 2.) The difference in temperature coefficient between any units at any given temperature is less than 15 ppm/°C.

CY10	11/32 ± 3/64	11/64 ± 1/32	5/64 ± 1/32	0.020 #24 AWG	0.25–0.50

CY30	49/64 ± 1/16	3/4 ± 5/64	9/64 ± 3/64	0.032 #20 AWG	5.00–7.00

FIGURE 1

MINIATURIZATION

The glass capacitor offers a higher degree of miniaturization than any other high quality capacitor. The volume of Type CY10 is only about 0.005 cubic inches; further reductions to as little as one-tenth of the volume of the standard wire lead types can be realized where wire lead terminals are not required. For physical dimensions see figure 1.

INSULATION RESISTANCE

When measured under the conditions specified in MIL-C-11272A, the insulation resistance will be found to be greater than 10^{11} ohms; that is, above the range of most standard measuring equipment.

INDUCTANCE

Because of the direct connection of the wire leads to the foil plates, the inductance is less and therefore the self-resonant frequency is higher than for other similar capacitors.

DIELECTRIC ABSORPTION

The dielectric absorption is extremely low; the percentage of charge reappearing after discharge is less than 0.1%.

MOISTURE RESISTANCE

The glass capacitor meets the temperature cycling, immersion, and 10-day moisture resistance tests which are prescribed in the military standards MIL-C-11272A for capacitors which must meet stringent environmental requirements.

CAPACITANCE TOLERANCE

Standard tolerance is ±5% or ±0.25 uuf whichever is greater. Also available as ±10%, ±2%, ±1%, but in no case less than ±0.25 uuf.

DIELECTRIC LOSS

Losses are extremely low. The dissipation factor at 1 kc. and 25°C. is in the order of 0.055% and is not dependent on capacitance. Losses remain relatively low at elevated temperatures.

LIFE

After 2000 hours at 125°C with 150% of full rated voltage capacitance change is less than 1% at 1 MC or 1 KC; at 125°C dissipation factor is less than 0.007 and insulation resistance is greater than 10^{10} ohms.

EXPOSURE TO RADIATION

The completely inorganic materials used in Corning capacitors make them highly resistant to nuclear radiation. Exposures to radiation levels of 10^{18} NVTth result in significant changes in properties.

CORNING FUSION-SEALED FIXED CAPACITORS

Layers of conductor and glass dielectric are sealed together at high temperature and pressure to form Corning capacitors into integral, rugged, monolithic units. The seal of the electrodes to the dielectric sheets cannot be broken or shifted without destroying the capacitor; so the properties of these capacitors are those of the closely controlled dielectric and are not determined by assembly methods or subsequent heat treatments.

It is generally recognized that this fused construction of the basic glass dielectric capacitive element used in Corning's capacitors provides outstanding electrical performance under standard environmental conditions. To this basic element, we have successfully added a **glass encapsulation** process with **glass-to-metal seals** at the leads. The resultant Corning CYF impenetrable unit insures reliable performance even in extremely severe environments, particularly those involving moisture and vibration.

Corning CYF Capacitors are **guaranteed to be four times** better than required by Mil specs for moisture resistance. They will withstand Mil-Std. 202A moisture conditions for **over 1000 hours.**

These miniature fusion sealed CYF units come with copper-clad nickel-iron terminals, hot solder dipped for reliable soldering or welding. Some of the many application areas include guided missiles, nuclear equipment, computers, aircraft, and any high reliability system.

Corning CYF Capacitors, which are practically indestructible under severe environmental stresses, meet or exceed all performance requirements of Mil-C-11272A. They are available in two sizes, CYF 10 and CYF 15 with capacitance values from 1 to 1200 uuf.

CHARACTERISTICS

Corning CYF Capacitors meet or exceed all performance requirements of Mil-C-11272A.

Voltage Rating—VDCW is 300v and 500v from −55 to +125°C. **No derating necessary.**

Temperature Coefficient—Temperature Coefficient is +140 ±25 ppm/°C from −55°C to +125°C at 100 kc or 1 mc. Temperature Coefficient difference between capacitors is less than 15 ppm. Retrace of temperature coefficient is essentially absolute. Capacitance drift is less than 0.1% or 0.1 uuf whichever is greater and is generally within the accuracy of measurements.

Capacitance Tolerance—Standard tolerance is ±5% or ±0.25 uuf, whichever is greater. Available as ±10%, ±2%, ±1%, but in no case less than ±.25 uuf.

Insulation Resistance—High I.R. over entire operating temperature range; at 125°C I.R. is greater than 500 ohm farads.

Losses—Losses are extremely low and remain relatively low at elevated temperatures. D.F. less than 0.001 at 1 kc and 25°C.

Life—After **2000** hrs. at **125°C** with 150% of **full** rated voltage capacitance change is less than 1% at 1 mc or 1 kc; at **125°C** dissipation factor is less than 0.007 and insulation resistance is greater than 10^{10} ohms.

Moisture Resistance—Exceeds all requirements of Mil-C-11272A and Mil-Std-202 Method 106. Corning CYF capacitors are guaranteed to withstand Mil-Std 202A (Method 106A) conditions for over **1000 hours.** The capacitors have been immersed in **boiling salt water** for **450 hours**-and saturated in **steam** at 15 pounds gage pressure for **150 hours** without altering their performance.

Radiation—The completely inorganic materials used in Corning capacitors make them highly resistant to nuclear radiation. Exposures to radiation levels of 10^{18} NVT$_{th}$ result in no significant changes in properties.

CORNING FIXED GLASS WAFER CAPACITORS

These compact capacitors are extremely rugged because the glass dielectric and conductor layers are sealed together at high temperatures and pressure. Electrodes are sealed to dielectric sheets in such a manner that the seal cannot be broken or shifted without destroying the capacitor. Thus, these capacitors have properties identical with those of the closely controlled dielectric and are not determined by assembly methods or subsequent treatments. The unique construction makes any need for further encasing unnecessary.

The construction features add up to the following advantages: fixed temperature coefficient; high insulation resistance; low dielectric absorption; readily used where miniaturization is demanded; and ability to operate in environments involving high humidity and high temperatures.

Corning Wafer Capacitors are available in two styles; W1, 2, 3, 4, and 5 (without leads), and WL-1, 2, 3, 4, and 5 (with leads). Capacitance range is from 1 to 10,000 uuf.

All meet the performance requirements of MIL-C-11272A and are ideally suited for use in printed circuit, modular or encapsulated assemblies in any high reliability systems such as guided missiles, computors, and nuclear equipment.

F-C-I TEFLON CAPACITORS

F-C-I Teflon capacitors are essentially identical to polystyrene capacitors in their electrical characteristics, with one important difference—Teflon capacitors may be operated at temperatures up to 200° C, whereas polystyrene capacitors have a maximum operating temperature of 85° C. Furthermore, the insulation resistance of Teflon capacitors is many times that of polystyrene at elevated temperatures.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D capacitors employ a newly developed plastic film dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. The table below shows the electrical properties of these capacitors. In view of these excellent characteristics, it is evident that F-C-I Type D capacitors are suitable for practically every type of high voltage D.C. application. With these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D capacitors are furnished in steatite tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. MINIATURE POLYSTYRENE AND MYLAR® CAPACITORS

HERMETICALLY SEALED — CLOSE TOLERANCE

F-C-I miniature polystyrene and "Mylar" capacitors are furnished in metal shells hermetically sealed with metal-glass compression type seals. The capacitor elements are non-inductively wound, and wire leads are carefully soldered to the swedged, extended foils to minimize self-inductance, power factor and noise. Characteristics of the polystyrene capacitors are given on pg. P-1156. The Mylar dielectric capacitors are characterized by high insulation resistance (10^6 megohm-microfarads at 20° C); 0.5% power factor; and a temperature coefficient of +500 PPM/° C.

The capacitors listed above are suitable for continuous operation at 125° C without derating. For 85° C operation, 100 volt series HD capacitors may be operated at 200 volts; 200 volt capacitors at 400 volts; 400 volt capacitors at 600 volts; and 600 volt capacitors at 1000 volts. To correctly designate 85° C capacitors, omit the letter "H" in the part number, and correct the single number standing for the voltage rating.

Prices listed above are for ±5% tolerance. For ±2% tolerance, add 20% and for ±1% tolerance, add 50% to these prices. These capacitors are also available in ceramic shells with epoxy resin end fill. Write for prices.

We are set up to produce these capacitors in any quantity to any odd value of capacitance at close tolerance for manufacturers of filter networks, R-C networks and the like. Write for information.

HIGH CAPACITANCE MYLAR® CAPACITORS

HERMETICALLY SEALED — HIGH INSULATION RESISTANCE

F-C-I Series D-2 capacitors are Mylar dielectric capacitors which possess extremely high insulation resistance, together with good power factor and dielectric absorption. The insulation resistance runs well over 10^6 megohm-microfarads at room temperature, even for the highest values of capacitance. The power factor and the dielectric absorption are both on the order of 0.5%. These properties make Series D-2 capacitors extremely useful in computers of moderate precision, in timing circuits, and similar types of circuitry. Standard tolerance is ±10%, and closer tolerances are available on order. (Case sizes indicated below are in inches.) (D3 indicates bathtub case.)

HAMMARLUND

STANDARD VARIABLE CAPACITORS

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC." Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0245" nominal. Tested at 1000 V. R.M.S., 60 cycles.

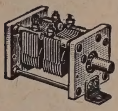
"VU" CAPACITORS



VU

FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided. **SPECIFICATIONS**—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance. **CONSTRUCTION**—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass. **SPECIFICATIONS**—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. HAMMARLUND

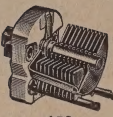
STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS



APC

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with ½" extended shaft for knob control or shaft coupling. "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use. **CONSTRUCTION**—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phos. Bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

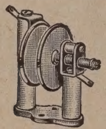
"NZ-10" CAPACITORS

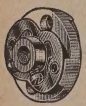


NZ-10

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

"FC" and "FNC" COUPLINGS



FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

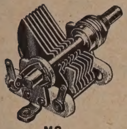
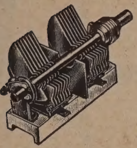
HAMMARLUND

STANDARD VARIABLE CAPACITORS

"MC" and "MCD" CAPACITORS



MC



MCD

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connctions and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. A rotor stop permits 180° clockwise rotation for increasing capacity. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. For optimum performance all Hammarlund "MC" capacitors have silver plated spring tempered wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor. The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. **SPECIFICATIONS**—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitors. like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver plated spring tempered wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. **SPECIFICATIONS**—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. RMS., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA" and "HFBD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug-type terminal mounted with the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but other incorporating constructional features identical to the smaller "HFA." An insulted shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

FP-WP Series

FP AND WP CAPACITORS

For top chassis mounting in filter and audio bypass circuits and TV applications. Extremely dependable under heavy ripple current and high surge voltage. All WP and FP capacitors are designed for high temperature (85° C) operation at full rated voltage, except as noted in table by (‡). Single, dual, triple and quad section units encased in compact rubber sealed aluminum cases with self-contained mounting feature. **Type FP** is supplied with Fabricated Plate (metallized cotton gauze) anodes, **Type WP** with etched plate anodes. Special internal design provides low RF impedance and minimum coupling between sections. Case at negative potential. Supplied insulating washer may be used where negative ground is not wanted. For twist-prong mounting through chassis slots. ***SIZES are shown at end of listing.**

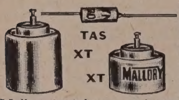
MALLORY TANTALUM CAPACITORS

P.R. MALLORY & CO. INC.
INDIANAPOLIS 6, IND.



Mallory offers the industry's best selection of tantalum capacitors in three general types: Sintered anode wet slug; sintered anode solid electrolyte; and, foil. Standard temperature range, −55° C to +85° C, with some types offering +200° C operation. **Catalog System:** New 13-digit system is used to specify Mallory tantalum capacitors. Each number is significant and completely identifies the item. The first three digits indicate type (HAT, TAP, etc.). Capacity is shown in µµf with fourth and fifth digits showing significant number (10) and sixth digit showing numbers of zeros (5). Tolerance is indicated by the seventh digit (W). Digits eight, nine and ten show WVDC at +85° C (016). Eleventh digit indicates polarity (P); twelfth, insulation (1); and thirteenth, case size or configuration (A). Thus, HAT105W016P1A is: HAT type, 1 µf, −0 +100% tolerance, 16 WVDC polarized, Mylar* insulation, axial leads. Please refer to bulletins shown for exact details. For your convenience, old catalog numbers are also shown. **Note:** Standard ratings available from distributor stock are shown in following tables. Other ratings available from factory stock.

TYPE HAT MICRO-MINIATURE

Micro-miniature sintered anode wet slug with double end seal for transistorized circuit applications. Temperature range, −55° C to +85° C; capacity tolerance, −0 +100% (W); polarized (P); Mylar* insulation (1); axial leads (A) standard. Available in other ratings, smaller size and with other lead configurations. Ask for Bulletin 4-43D.

"ROCKETTES"

Planet ROCKETTES are impregnated and jacketed with a HARD-as-ROCK plastic which will not dry out, shrink away from the leads nor develop fissures nor cracks, thus guaranteeing against the entrance of moisture and guaranteeing good shelf life and long service life. The coiled heads of the leads are securely soldered to the foil, which is imbedded in the same plastic used as an impregnant, making it impossible for them to work loose or pull out. ROCKETTES have exceptionally high insulation resistance which is maintained proportionately over the entire temperature range of —30° to +85° C.

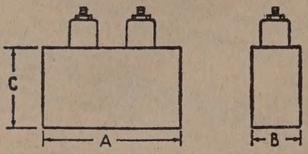
New TYPE LK *New*
DC FILTER CAPACITORS



Type LK capacitors are an entirely new design which have been proved by rigorous testing in the laboratory and by usage in the field for several years. This is the first listing to be published.

Type LK capacitors are smaller and have a reliability factor which is unexcelled. Their primary usage is for DC filtering and DC blocking applications.

Temperature Range is minus 65°C to 105°C. With full rated voltate from –65°C to 85°C.
Life 2500 hours at rated voltage at 85°C.
Case is the CP70 style terne plate metal, primed and finished with a synthetic enamel.
ENVIRONMENTAL and other testing may be performed per MIL-C-25A, Characteristic E. Type LK exceeds the best characteristics of paper capacitors in a much smaller size. Comparison of sizes will show that the volume is much less than required for MIL-C-25A equivalents in Characteristic F and are better than characteristic E quality.

HV SELENIUM RECTIFER TYPE

HV SELENIUM RECTIFIER TYPE is smaller than the **HV SEALED TUBE.**
INPUT 118 volts 60 to 400 cycles. **HV SELENIUM RECTIFIER TYPE** is designed to avoid rectifier type failures by the use of long life selenium rectifiers with an estimated life of 20,000 hours at 50°C temperature. Lower ambient temperature will increase life.

RF AND PULSE GLASS CAPS The plastic films used in the manufacture of RF and PULSE GLASS CAPS have very low losses. These capacitors will handle large peak currents such as encountered in a 25 ohm type E plus forming network charged to the peak pulse voltage at a repetition rate of 1000 PPS.

TYPE AM LISTING

METALLIZED MYLAR* has several advantages that are outstanding. The self-healing characteristics are well-known and extend the useful life of the capacitor. The second, and most over-looked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in ex-small size without sacrificing life, reliability and economy.

Size is given for grounded case style. If floating case is required add 1/16" to "L" dimension.

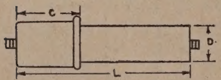
TYPE OT
TUBULAR TO 120KV



Type OT capacitors are designed for long life at high voltage in the medium temperature range. Type OT capacitors are the smallest and most economical capacitors available for high voltage DC filtering.

CASE is hermetically sealed and designed for operation under oil. Many of the lower voltage units may be operated in air. Many capacitance values at stated voltages are available in two physical sizes, providing the design engineer flexibility in placement of parts and circuit wiring.

MOUNTING. Must be mounted vertically, corona cap at top.

TEMPERATURE RANGE. Type OT capacitors will give long life in the temperature range of −40°C to 55°C with the rated voltage applied.

TERMINALS and mounting studs are axial 3/8-16x3/4" long.

TYPE TAK TANTALUM CAPACITORS

Pyramid TAK Tantalum slug capacitors are miniaturized to provide maximum space economy. Pyramid Tantalum capacitors have cylindrical cases and contain a non-corrosive electrolyte. Due to the special construction and materials used in the manufacture of Pyramid Tantalum capacitors, these units are booth seep and vibration proof. In addition this type of capacitor assures long service life and corrosion resistance; made to meet MIL-C-3965 specifications, Style CL-64 and CL-65 (insulated sleeve).

Type CQM Computer Quality Electrolytic Capacitors

PYRAMID
CQM

FEATURES

1. High reliability, ideally suited for computer requirements.
2. Highest purity aluminum used.
3. Molded terminals for tight permanent seal.
4. Low leakage current.
5. Long shelf life.
6. Low equivalent series resistance.

Computer circuits require electrolytic capacitors of the highest reliability. Pyramid type CQM capacitors, designed to operate at —20° C. to +65° C., fill this requirement. They are made with electrodes of the highest purity aluminum obtainable (99.99%) and specially formulated electrolytes.

Carefully inspected materials, coupled with controlled manufacturing methods, produce a capacitor capable of meeting the most exacting computer specification.

The capacitors are made in high purity aluminum containers hermetically sealed with molded tops held in place by rolling the can rim securely over a buna rubber gasket. The terminals are molded into the top. These terminals and the buna rubber gasketing insure a tight, permanent seal.

Two types of terminals are available: (1) a screw type terminal with tapped inserts, (CQM); (2) a lug type terminal, with anti-rotational locks, swaged to solid aluminum inserts, (CQML). Internal connections to the aluminum inserts are made with straps of the same high purity aluminum as the electrodes. This feature contributes to low leakage and long shelf life.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE DCM

energy storage electrolytic

The SANGAMO Type DCM capacitor is a high quality, electrolytic capacitor specially designed for use as an energy storage component in DC circuitry where peak power requirements exceed the maximum output of the associated power supply. The Type DCM is enclosed in an aluminum can and is normally furnished with a cardboard insulating sleeve. Aluminum terminal assemblies that include a #10-32 machine screw are permanently fixed in the molded cover. A pressure sensitive vent is provided as a safety mechanism in each cover. A footed, wrap-around mounting bracket is available at extra cost per unit.

TYPE FMD-FMT

electrolytic

Sangamo Types FMD and FMT electrolytic capacitors are now supplied in smaller case sizes and with additional popular values available.

These capacitors are specially designed for rugged television requirements where +85°C operating temperatures are encountered. They are similar in design to the Type MT in every respect except leads. The Type FM is constructed with flexible, insulated wire leads and stud terminals which eliminates the problem of crossed wires and the necessity of using insulating sleeves.

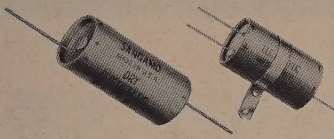
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS



TYPES MT - MTD *electrolytic*

Sangamo MT and MTD electrolytic capacitors are now supplied in smaller case sizes with additional popular values available. The MTH designation that was previously used for high-capacity, low-voltage units has been discontinued. These high-capacity, low-voltage capacitors are now listed under an MT number. Mounting straps are provided on all capacitors of 7/8″ and 1″ diameter.

These capacitors are specially designed for television and other electronic equipment when operation at +85°C is required. They are sealed in aluminum containers and encased in heavy insulating sleeves on which polarity is clearly marked.

TYPE MMT *electrolytic*

SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operating requirements of low voltage circuits. They are small in physical size and are self supporting by means of reinforced bare tinned copper wire leads. The Type MMT capacitors are contained in drawn aluminum tubes encased in fitted cardboard insulating sleeves on which the polarity is clearly marked.

TYPE PL
electrolytic

The SANGAMO Type PL "Twist-tab" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C and under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection. The Type PL has been especially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

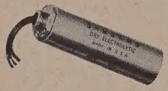
TYPE SL *electrolytic*



The SANGAMO Type SL electrolytic capacitor is designed primarily as a direct replacement unit. The Type SL is assembled in a round aluminum can with threaded neck to provide easy mounting to a chassis with the aid of a pal nut that is supplied. The Type SL is completely insulated from the container; the negative connections being made to one of the insulated leads extending through the threaded neck of the can.

TYPE TS *electrolytic*

Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface. The base pins are molded in the bakelite base and nickel-plated to prevent corrosion and insure good contact with the socket terminals.

SANGAMO CAPACITORS

MICA CAPACITORS

TYPES F1-F2-F3 *mica*

Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

TYPES G1-G2-G3-G4 *mica*

Type G ceramic cased capacitors are intended for service where highest voltage and R.F. Current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

TYPE M
silvered mica button® capacitors

Small and light in weight SANGAMO Type M Silvered Mica button capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for V.H.F. and U.H.F. applications and are constructed to be electrically and mechanically stable. The silver plated case design performs the dual purpose of shielding and being the low potential terminal. The high potential terminal through the center of the capacitor allows 360 degrees electrical current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications. Normally furnished in characteristic "D" in 500 working volts D.C.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE S *Subminiature hermetically sealed metal tubular paper dielectric capacitors*

SANGAMO Types SBA and SDA are designed to meet the demands for a subminiaturized, high quality, hermetically sealed paper tubular capacitor. These units are encased in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal, solder-seal terminals.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 33-33M

molded paper tubular and

molded MYLAR tubular capacitors

The SANGAMO Type 33, which uses a paper dielectric, and Type 33M, which uses a Mylar* dielectric, are molded in thermosetting plastic to provide more stable capacitance values, high moisture resistance, excellent seal and operation up to +85°C. The Type 33 can be satisfactorily operated at 100°C when the voltage is derated to 50% of the 85°C value. The Type 33M can be satisfactorily operated at 125°C when the voltage is derated to 50% of the 85°C value.

TYPE 71

paper

SANGAMO Type 71 paper dielectric capacitors are impregnated with Diaclor—a specially compounded, chemically pure, chlorinated dielectric oil. It possesses a high dielectric constant, high resistivity, low power factor, high dielectric strength and is non-explosive. Each unit is contained in a lead coated steel case and finished with grey lacquer paint over a zinc chromate under-coat.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPES 40-41-42-43 *paper*

SANGAMO Types 40 and 41 paper dielectric capacitors are ideal for use in high voltage filter applications. Enclosed in aluminum containers with a threaded neck, they mount to the chassis by means of an insulating washer and pal nut. In the Type 40, one connection is provided by an insulated terminal and the other is provided by the case and washer with a solder lug. In the Type 41, both terminals are completely insulated from the case. The Type 40 and 41 are impregnated with Diaclor to provide an F characteristic. Types 42 and 43 are physically identical to Types 40 and 41 respectively, except mineral oil is used as an impregnant to derive an E characteristic and the case length is larger.

PHOTOFLASH ELECTROLYTICS and ACCESSORIES

Build your own Electronic Flash!

Now you can build up-to-the-minute electronic photoflash units using the very latest low voltage circuits. These units are comparable to commerically manufactured gear in size, weight, and efficiency, yet can be built for considerably less than ready-made units. Your electronic flash eliminates flash bulb costs, too, and it stops action with better results. Sprague Booklet C-703 gives you step-by-step instructions for building four different models. Every detail is clearly illustrated and explained, making it easy to put one together in several hours. Photoflash accessories, listed below, are fully described and illustrated in this invaluable guide. These special items, plus a few standard parts and miscellaneous material, are all you need to build this outfit.

SPRAGUE CAPACITORS

125°C FOIL TANTALEX® CAPACITORS

- Ideal where small physical size, stable electrical characteristics, and long service and shelf life are important.
- Type 120D and 122D available marked to meet MIL-C-3965B. Order by complete military type designation.
- Capacitance remains stable at low operating temperatures—may be used where aluminum-foil electrolytics are inoperable
- Extremely low leakage current
- Standard capacitance tolerance: ±20%
- May often replace, where circuit parameters permit, aluminum electrolytics, paper capacitors, and metallized paper capacitors, resulting in substantial saving of weight and space
- Double synthetic-rubber and TFE-Fluorocarbon elastomer combination seals ensure reliable service life at 125°C
- Standard units have outer plastic insulating wrap over case. For bare metal case, end Cat. No. in "0" instead of "1"

SPRAGUE CAPACITORS

VITAMIN Q® SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: —55°C to +85°C and —55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next)

Listed below are the most popular insulated section (ungrounded case) capacitors. For information on other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, consult your Sprague Industrial Distributor.

NOTE: The capacitors listed in this table have a capacitance tolerance of ±10%. For ±20% units, change the 4th digit following the letter 'P' in the catalog number from 9 to 0.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

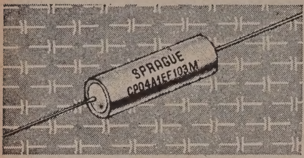
SPRAGUE CAPACITORS

MIL-C-25A CAPACITORS — TYPES CP04 and CP05



- Impregnation with Vitamin Q assures capacitors exceed MIL-C-25A performance requirements.
- Inserted tab construction for applications where minimum size is necessary.
- Positive hermetic closure of the metal cases assured by glass-to-metal solder-seal terminals.
- Type CP04 has plain metal case—Type CP05 has insulating sleeve.
- Available in Characteristic E (—55°C to +85°C) or Characteristic K (—55°C to +125°C).
- Only popular insulated section (ungrounded case) capacitors are listed. For information on grounded case units, consult your Sprague Industrial Distributor.

NOTE: The capacitors listed in this table have a capacitance tolerance of ±10%. For ±20% units, change the last letter in the catalog number from K to M.

SPRAGUE CAPACITORS

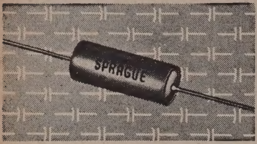
118P DIFILM® METALLIZED CAPACITORS



- The best of their type which it is possible to produce in the present state of the art
- Rated for operation at 125°C WITHOUT VOLTAGE DERATING
- Unique dual dielectric—a combination of metallized paper and of polyester film, impregnated with special high-temperature mineral wax
- Subjected to stringent quality control during manufacture
- Higher insulation resistance than any other metallized paper capacitors—at 125°C, minimum product of insulation resistance and capacitance is 10 megohm-microfarads for 200 V units or 40 megohm-microfarads for 400 and 600 V units
- Capacitor sections are effectively of non-inductive construction, resulting in capacitors unmatched in performance quality by any other metallized capacitors •
- Hermetically sealed, with glass-to-metal solder-seal terminals
- Have unusual self-healing characteristics, in the rare event of capacitor dielectric breakdown
- May be used at extremely low voltages where metallized paper construction has previously been unsatisfactory
- For complete performance characteristics, see Engineering Bulletin 2211A
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor

121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING—extremely important in military and industrial equipment where higher temperatures are encountered
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page
- High insulation resistance—at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads
- Hermetically sealed with glass-to-metal solder-seal terminals—capacitor cases are of corrosion resistant materials—similar in appearance to Type 118P
- May be operated at low voltages, unlike many other metallized capacitors
- For complete performance data, see Engineering Bulletin 2210
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor

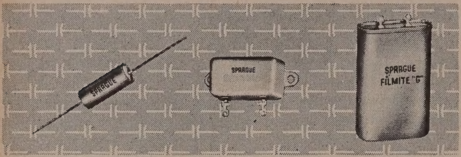
SPRAGUE CAPACITORS

METAL-CLAD FILM CAPACITORS



Polystyrene film dielectric capacitors have the lowest dielectric absorption of all film capacitors. The exceptionally high insulation resistance will generally exceed 10,000,000 megohm-microfarads. They have extremely low power factor, close capacitance tolerance, high capacitance stability with temperature change and high operating temperatures. The unusual properties of these capacitors make them particularly suitable for circuit applications demanding such characteristics. All capacitors listed here are hermetically sealed in metal cases

114P STYRACON® TUBULARS

Specially processed polystyrene film dielectric ● Operating temperature range, —55°C to +85°C ● High insulation resistance ● Low dielectric absorption (under .05%) ● High capacitance stability (less than ±.2% drift) ● Extremely low power factor (high Q) ● Units listed below have capacitance tolerance of ±5%. For ±20%, change 8th digit in catalog number from 5 to 0; For ±10% change to 9; For ±2% change to 2; For ±1% change to 1 ● Units listed below have plastic insulating sleeves. For plain metal case, change last digit in catalog number from 4 to 2

SPRAGUE CAPACITORS

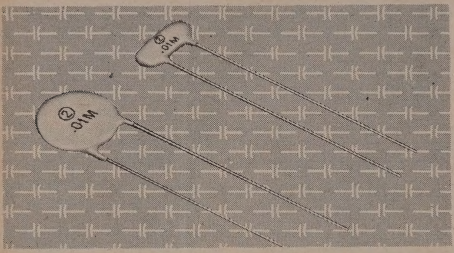
CERA-MITE® CERAMIC CAPACITORS



- Tiny, Tough, Dependable In Every Application
- Low Self-inductance Of Silvered Flat-plate Design Means Very High By-pass Efficiency In All TV Circuits
- Flat-plate Construction Permits Higher Self-resonant Frequency Than Tubular Ceramic Or Molded Mica Capacitors
- Tough Moisture-proof Coating Protects Against Short-circuiting And Assures Good Performance Under Severe Conditions Of Humidity And Vibration
- Cera-mite Capacitors Easily Fit Into Tight Spaces, Even Across Subminiature Tube Sockets
- Designed For 85°C (185°F) Continuous Operation

GENERAL APPLICATION TYPES

- Excellent Where Temperature Coefficient Is Not Important, Such As By-pass and Coupling Applications
- Ideal For Replacing Older Types Of General Application Capacitors Such as Molded Micas Tubular Ceramics, and Paper Tubulars

HYPERCON® CERAMIC DISCS

- Ultra-miniature ceramic discs ideal for use in transistorized circuitry
- Designed for by-pass and coupling applications but particularly well-suited for any low voltage use where high capacitance and low power factor are important considerations
- Superior to electrolytic capacitors of similar capacitance values because of the very low power factor of Hypercon Capacitors
- Capacitance Tolerance: GMV

- Bulplates (rectangular plates) and Multi-comps (circular discs) are especially designed to save space and reduce assembly time
- Combinations of resistors and capacitors of maximum compactness
- Integral connections are "printed" and brought out to external leads which are anchored to the basic ceramic plate
- Completed units are protected by a tough moisture-proof coating
- Maximum voltage to be applied across these units is 250 volts d-c, except on D-1 which is rated at 100 volts d-c
- Types ACI-1, ACI-2, ACI-3, ACI-4, PRC-1, PRC-3, PRC-4, PRC-5, PRC-6, V-14, and V-15 are Multi-comp disc-type units—All others are Bulplate rectangular plates

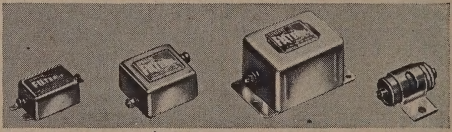
FILTEROL® FILTERS



FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

LF-1 TRANSIMULATOR®

SPEEDS DESIGN OF TRANSISTOR CIRCUITS BY ELIMINATING BREADBOARD LAYOUT

Bring transistor circuits to life in a matter of minutes with the Sprague LF-1 Transimulator. This new instrument lets you simulate any amplifier stage, a-c or direct-coupled, short of high power audio output; also multivibrator, switching, phasing, push-pull, Class A and B, and many others using cross-coupled Transimulators . . . whether the circuit is common or grounded emitter, base, or collector . . . whether the transistors are PNP, NPN, or Surface Barrier. You can simulate circuits stage-by-stage for cascade operation . . . or use a separate Transimulator for each stage to get simultaneous multi-stage operation.

Bring Circuit Diagrams To Life In Minutes

Everything you need for RC amplifier circuits is built right into the LF-1, including coupling capacitors . . . bias and load resistors . . . battery voltage supplies . . . Base Collector—Voltage Divider stabilization circuits . . . 5-way binding posts for transformer coupling and metering. Whether you're designing audio circuits or switching circuits, you'll get a true picture of operating parameters minutes after you've drawn the circuit diagram . . . without wasting valuable time with breadboard and soldering gun.

Pays For Itself In A Matter Of Weeks

An ideal laboratory instrument, Transimulators are inexpensive enough to justify several on every bench. You can even use the LF-1 to test transistors *in the circuit* . . . the only real proof of design parameters. And a complete step-by-step instruction manual makes operation fast, simple, and easy.

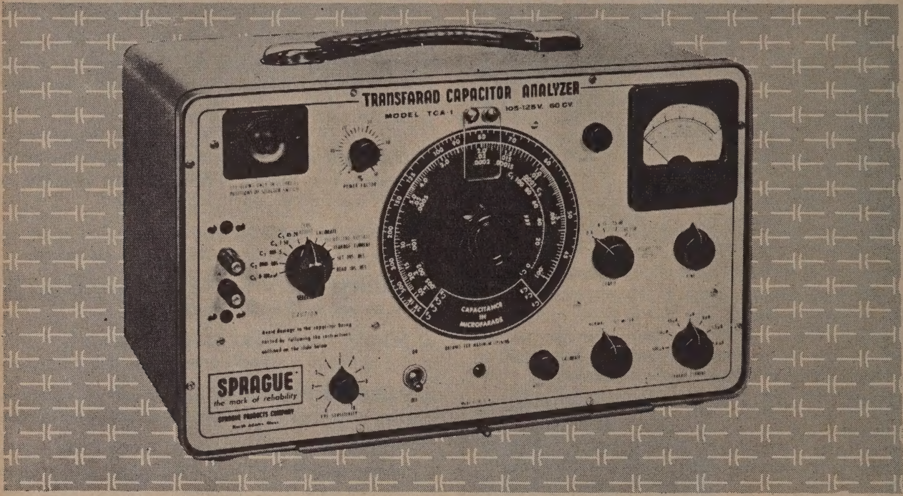
TCA-1 TRANSFARAD* TRANSISTOR CAPACITOR ANALYZER



THE FIRST ANALYZER SPECIFICALLY DESIGNED TO SAFELY TEST TRANSISTOR CIRCUIT CAPACITORS

CAPACITANCE RANGE		ACCURACY			
Scale	Range of Scale	±2%±1μμF	±3%	±5%	Reading Accuracy is the Determining Factor
C_1	0–100μμF	0–100			
C_2	.0001–.005μF		.00015–.001		.001–.005
C_3	.001–.5μF		.005–.1	.001–.005	.1–.5
C_4	.1–50μF		.5–10	.1–.5	10–50
C_5	45–2000μF		50–200	45–50	200–2000

- **CAPACITANCE BRIDGE** measures 1μμF to 2000μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurements at exact rated voltage.

- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μa to 600μa in seven ranges.

The Sprague TCA-1 is specifically designed to safely test capacitors such as tantalum capacitors, low-leakage aluminum electrolytic miniatures, low voltage ceramics and low voltage paper and film capacitors used in transistor and other low voltage circuits. No industrial laboratory or modern electronic service shop can afford to be without one!

MODEL TCA-1 .... $197.50 net

- **POWER FACTOR** measured by Wien bridge from 0 to 5 per cent.

- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.

- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.

- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.

- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.

- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

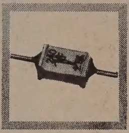
Vitramon® solid state PORCELAIN CAPACITORS

AXIAL-RADIAL



AXIAL

RADIAL

The superior electrical and mechanical characteristics exhibited by Vitramon® capacitors are attributes of their solid state composition — fine silver electrodes molecularly fused within a solid block of high grade porcelain, forming a monolithic unit that requires no case or hermetic seal.

"Layering" of electrodes makes possible a much greater active dielectric area within the same cubic content. Perfect bonding of materials minimizes loss and noise and results in greater stability over a temperature range of —55°C to 200°C.

Vitramon® capacitors are used extensively in guided missiles, jet ignition, proximity fuses, and in radar, servo, guidance, fire control, telemetering, and carrier telephone systems.

CRAMOLIN®

A NEW CONCEPT ON IMPROVING CONTACT PERFORMANCE

. . . *and here are* 14 REASONS WHY . . .

1. Reduces contact resistances to their minimum values.
2. Reduces sparking of brushes on commutators.
3. Improves performance of contacts and collector rings.
4. Protects against salt air and sulfidic atmosphere and will not absorb moisture.
5. Applied on moving parts, Cramolin will stay on. Cramolin contains a chemical compound which is strongly attracted by metal surfaces and cannot be removed completely, even by high pressure friction.
6. Fungus growth will not develop on Cramolin-films, because Cramolin contains mineral and synthetic ingredients only.
7. Cramolin is not aggressive on baked varnishes, although it may affect some nitro-cellulose lacquers.
8. Max. effective operating temperature range is —34°C to +150°C (these are conservative values, consult us for higher ranges.)
9. Cramolin can be safely used at a relative humidity of 95% and temperatures up to 100°C.
10. Cramolin will perform equally as well under air pressure as well as in a vacuum.
11. Insulation resistance of 10^{13} ohms between contacts at distance of 1 cm on Trolitul (phenol-formaldehyde resin).
12. Tests have indicated that no injurious secondary effects arise.
13. Cramolin may be applied on old contacts without special precautions. All non-metallic layers, dust, resin, etc., will be dissolved and removed at once by rubbing it off, or by operating the contact several times.
14. Under general operating conditions Cramolin should be reapplied after two to three years (on high frequency and low current contacts). In highly corrosive atmosphere (containing acid, sulphide, etc.) reapplication should take place after one year. If the air contains unusual quantities of ammonia, contacts should be cleaned with our modified Cramolin.

ERSA-MINIATURE SOLDERING IRON

A NEW STREAMLINED LOW TENSION SOLDERING IRON

The power supply for this low voltage (6 volts) iron may come from a battery or a special low voltage transformer.

The ERSA MINIATURE with its 5 foot, light-weight, twin-cable, securely molded to the plastic handle and plug, weighs only 3 ounces.

The streamlined handle rests comfortably, like a fountain pen, in the hand and permits tireless operation in production work. The slim shaped heating units of 10, 20 or 30 watts may be interchanged in the same handle, in a matter of seconds to the desired wattage. Heating units are screwed into the handle as easily as one would insert a bulb into a flashlight. This method guarantees reliable and continuous contact performance. The soldering tips are simply pushed on the heating unit, and can just as easily be removed.

A heat-up period of 40 seconds is sufficient to make the ERSA MINIATURE ready for use and has built-in protection against capacitative stray effects from mains which could damage transistors or endanger the operator.

The specially designed Control Transformer Models R10 and R30 will solve the most complicated soldering problems. Both transformer models have a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 7 volts, thus making it possible to select a temperature range between 300 to 500°C. When not in use, the ERSA MINIATURE iron rests on a special nozzle provided on the transformer. This protects against overheating.

Control Transformer R10 was solely made for use with the ERSA MINIATURE Iron Model 10W. The R30, with a greater output, permits universal use of all the various ERSA MINIATURE irons with their different capacities. Several ERSA MINIATURE irons may be hooked up to total 30 watts.

CORNING STANDARD INDUCTORS
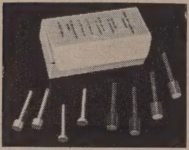
TECHNICAL DATA



Two each of these four different types of cores: 1) red dot, 5.0 permeability; 2) blue dot, 9.2 permeability; 3) 1/4" brass; 4) 3/32" brass.

NOW . . . LOW COST INDUCTORS

Determine the exact inductance values you need quickly and inexpensively with this handy new test kit available only from Corning distributors. The kit consists of 10 standard value glass inductors which you can modify to specific odd values with four different types of cores.

These glass inductors are ruggedly built to take repeated handling in test labs or on production lines. The only inductors made without wires, the coil consists of a silver oxide film fired to the glass, then copper-plated and tin-dipped. It can't shift or work loose.

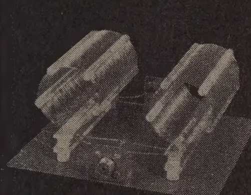
AIR WOUND COILS

Illumitronic Engineering has developed a complete, versatile series of air core inductors designed especially for the amateur rig, or for prototypes of RF transmission equipment. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. The series consists of a standard coil type, a variable pitch type, and an indented type, in a range of diameters from ½ inch to 3 inches. All Air Dux® coils are constructed of tinned (silver or formvar) copper wire wound on large low loss polystyrene rods for the highest mechanical strength and lowest electrical losses.



air dux® BALUN

Unbalanced coax lines used on most transmitters can be matched to balanced lines of either 75 or 300 ohms impedance by using the B2009 air dux coils. May be used with transmitters and receivers without adjustment over the frequency range of 80 through 10 meters, and will handle power inputs up to 200 watts.

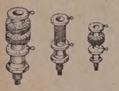
Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils



The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

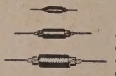
Frequency Selective R.F. Chokes



Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form $\frac{3}{16}$″ diameter x ¾″ long. Iron core form $\frac{7}{32}$″ diameter x ⅞″ long. Leads are 1½″ long. Inductance tolerance: plus or minus 5%.

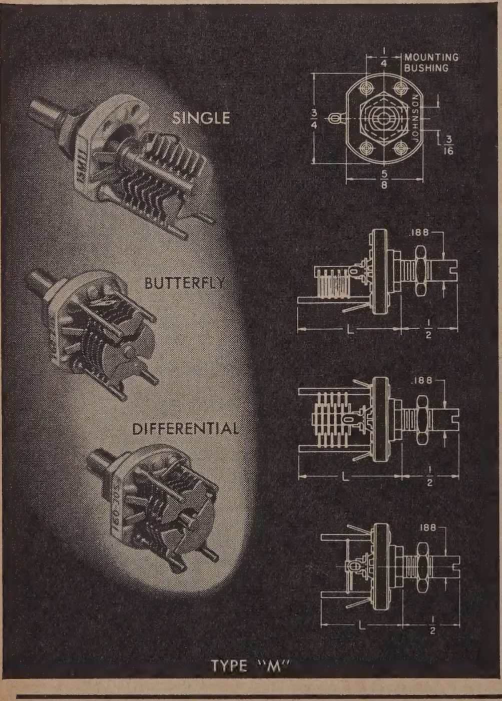
TYPE "U"



TYPE "M"

TYPE "U" CAPACITORS

This tiny Type "U" sub-miniature air variable capacitor requires less than 0.2 square inch of space for chassis or panel mounting. Rotor and stator are precision-machined from one piece of solid brass for outstanding mechanical stability and uniformity. Unit offers high "Q", high torque-to-mass ratio, and low temperature coefficient — provides absolute freedom from moisture entrapment found in trimmer capacitors of the enclosed or solid dielectric type. All metal parts are silver plated — ceramic is steatite Grade L-4 or better. Exceptionally uniform delta C and voltage characteristics. Breakdown ratings 850 volts DC. on .010" plate spacing 189-1 thru 189-6; 1300 volts on .016" spacing on 189-26 thru 189-28. Extra heavy end rotor plate protects against accidental damage during handling. No special tools required for installation — slotted end accommodates large screwdriver for quick adjustment. Double pierced, wide terminals facilitate wire or printed circuit use. Specials are available in production quantities.

TYPE "M" CAPACITORS

These small Type "M" miniature air variable capacitors are excellent for use in compact equipment. Bridge type stator terminal provides an extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Large beryllium copper compression rotor contact provides steady torque — and rotor stays "put" where set. Rotor contact and all other metal parts are nickel plated — steatite insulator is DC-200 treated. Mounting bushing threaded with 1/4-32 flats to prevent turning — mounting nut furnished. Peak voltage 1250 volts on .017" spaced units; 850 volts on 160-130 which is spaced .013". 3/16" diameter shaft* slotted for screwdriver adjustment. Available in production quantities with the following features: locking bearings; 180° stop; various shaft extensions; high torque; silver or other platings.

*Instrument type tuning knob to fit 3/16" shaft available. (See page on knobs and dials.)

TYPE "L" CAPACITORS

These high quality, ceramic soldered Type "L" capacitors are an ideal choice for applications requiring extreme stability and strength. Rotor bearings and stator support rods are actually soldered directly to the heavy 3/16" thick steatite insulator, making these capacitors practically impervious to shock and vibration. Special split-sleeve tension bearing and silver-plated beryllium copper contact provide constant torque and smooth capacity variation. Heavy brass soldered plates and large diameter tie rods provide excellent rigidity. Removable chassis mounting brackets can be used to mount auxiliary equipment. Plating is heavy nickel – plate spacing .030". Peak voltage rating is 1500 volts. Also available with .020", .060", and .080" spacing as well as special platings, shaft lengths and stator terminal locations in production quantities. Bearings threaded 3/8-32", mounting nut provided. Models with 6-32 tapped mounting posts soldered to end frame also available on special order.

TUBE SOCKETS — GENERAL INFORMATION

In order to simplify the selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, all Johnson tube sockets have been categorized under a socket standardization program.

By reducing the number of variations in special socket types, it is possible to maintain stocks of military and industrial type sockets as well as standard sockets, permitting shorter delivery cycles on quantity orders. Specifications for the three variations of each socket type are listed within each section of descriptive matter.

Detailed specifications covering the complete Johnson tube socket line have been prepared for Engineering Department use — should you desire a copy of Socket Standardization Booklet 536, please make your request on company letterhead.

Designed for use with high power transmitting tubes, these sockets are available in many designs — with or without, low inductance screen grid by-pass capacitors. Basic socket is molded of low dielectric loss-factor Kel-F plastic. Control grid contact "guide" is machined for greater alignment accuracy, and tapped for 6-32 machine screw. All contacts are low-resistance silver-plated beryllium copper. Tube pin contacts are heat treated to provide positive contact pressure as well as extended life. Annealed soldering tabs may be easily bent or formed. **Additional specifications and information on this group of sockets are available on Data Sheet 755.**

Rugged light weight basic socket with silver-plated brass mounting saddle. Cathode terminals insulated. Four elongated .140" x .234" mounting holes to accommodate mounting circle diameters from $2\frac{27}{64}$" to $2\frac{39}{64}$". Mounts below chassis through $1\frac{21}{32}$" diameter hole.

INSULATORS — GENERAL INFORMATION

These high quality steatite and porcelain insulators have heavily glazed surfaces and are furnished with heavy nickel-plated brass hardware suitable for exposed applications. Types designated -2 have jack to accommodate Johnson or other standard banana plugs.

INSULATED THRU-PANEL BUSHINGS

This group of thru-panel bushing assemblies consists of a pair of identical steatite insulators along with cushion washers and hardware. The 135-55 assembly has interlocking insulators which are self-centering in mounting hole and may be used on very thin panels.

THRU-PANEL INSULATORS

Available in steatite or porcelain types, these high voltage insulators are compression mounted by means of a stud throughout the entire length of the unit. Extrusion of insulator base extends thru mounting hole, increasing the breakdown rating. Units have flat mounting surfaces and are furnished with cushion washer. Types with jacks have terminal permitting connection above, as well as below panel.

ANTENNA STRAIN INSULATORS

The 136-151, 136-152, and 136-153 have heavy 1½″ diameter wet process porcelain insulator with specially sealed end bells of non-corrosive aluminum alloy. Porcelain is glazed to prevent moisture absorption. Numbers 136-107 and 136-112 are wet process, 1″ diameter glazed porcelain. Number 136-104 is dry process, glazed ⅝″ square. The 136-32 is a compression type strain insulator for aircraft or guy wire applications — made of dry process glazed porcelain.

VARIABLE FREQUENCY OSCILLATOR

The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6AG7 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive a 6146 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

Delay Lines and Networks • *"Designed for Application"*

The James Millen Mfg. Co., Inc. has been producing continuous delay lines and lump constant delay networks since the origination of the demand for these components in pulse formation and other circuits requiring time delay. The most modern of these is the distributed constant delay line designed to comply with the most stringent electrical and mechanical requirements for military, commercial and laboratory equipment.

Distributed-constants delay line is furnished in three forms:

●
1. Bulk line
2. Flexible sealed completed units
3. Cased hermetically sealed completed units

The bulk delay line is approximately 5⁄16 in. diameter and is furnished in random lengths. It is priced "by the foot."

The flexible, sealed, complete lines are furnished with delay time of from 0.1 microseconds to 10 microseconds. The terminals are No. 18 tinned leads, extended through molded end caps. This form of line is particularly useful in applications where space is at a premium, as the line can be tucked around the edges of the chassis, in otherwise waste space. The flexible lines are furnished with terminals on both ends for transmission use or with a dummy molded end replacing one of the terminals for pulse forming lines. Delay time is specified as time required for the transmission through one length of line only.

Care must be used not to coil line around a diameter of less than 4½ in.

The cased lines are mounted in hermetically sealed metal containers with "metal to glass" terminals. Lines of this type can be furnished in values up to approximately 36 microseconds and with multiple sections, in a single case. Delay lines from 0.5 microsecond to 1.5 microseconds 1350 ohm characteristic impedance are mounted in a standard can 4¾ in. long by 4¾ in. high, by 1 in. thick. Delay lines from 0.1 microseconds to 0.5 microseconds are mounted in a standard can 1 inch by 1 inch square and length to accommodate the particular time-delay line requirements. Delay lines 550 ohm impedance from 0.1 microseconds to 0.25 microseconds are also mounted in the standard 1 x 1 inch square can.

Case size, terminal arrangement, mounting feet or lugs, etc., can be furnished to customer's requirements.

Due to the special nature of delay line applications, we list no standard units, but solicit correspondence regarding your exact requirements.

ELECTRICAL CHARACTERISTICS:

Characteristic Impedance: 1350 ohms ± 20% or 550 ohms ± 20%. Special lines of any impedance between 400 ohms and 2000 ohms can be supplied.

Time Delay: Approximately 22 inches per microsecond for 1350 ohm line. Approximately 4.1 feet per microsecond for 550 ohm line.

Frequency Response: 1350 ohm line — When a 1 microsecond square pulse is applied to the line, the leading edge of the pulse after transmission through 4 microseconds of line has a time rise of not more than 0.2 microseconds and the duration of the pulse is less than 1.5 microseconds. (Line terminated by characteristic impedance.) Rise time is a function of delay.

Band Pass: A function of delay.

Attenuation: Approximately 1.0 db. per foot for one microsecond pulse. With a four microsecond delay line terminated in its characteristic impedance and a one microsecond square pulse input, the transmitted pulse height is no less than 35% of the input pulse height.

Test Voltage: 600 volts d.c. between winding and shield, between winding and case and between shield and case.

Leakage Resistance: 100 megohms or more between winding and shield and between winding and case.

Ambient Temperature Range: Minus 50 degrees centigrade to plus 85 degrees centigrade.

Thermal Drift: Less than 0.00038 microseconds per microsecond delay per degree centigrade.

Weight: Approximately 0.6 ounce per foot.

Many special applications require lumped-constant delay line. We are in a position to manufacture such lines to your specifications. The above illustrations are typical examples. Other designs including hermetically sealed units can be supplied.

Magnetic Metal Shields

The James Millen Mfg. Co., Inc. has for many years specialized in the production of magnetic metal cathode ray tube shields and bezels for the entire electronic industry, supplying magnetic metal shields to manufacturing companies, laboratories and research organizations. The study of such problems has resulted in the use of two outstanding metals for this purpose: NICOLOI and MUMETAL. It is possible by selecting the proper material, that is, Mumetal or Nicoloi, or the correct combination of these materials, to reduce the effect of undesired magnetic fields.

Mumetal is generally used on equipment requiring the most thorough shielding, and where the trouble-causing field is not of excessive magnitude. Nicoloi is very effective in reducing fields of high flux concentration. Single Nicoloi shields are satisfactory for general purpose application where the ultimate design does not necessitate too critical consideration of the effect of external fields. Where there is a combination of the requirement for optimum shielding and an abnormally high external field, the combination of Nicoloi outer shield and a Mumetal inner shield is used. The Nicoloi outer shield reduces the high field most effectively; and the Mumetal inner shield is then operating under the best condition whereby it reduces the interference from a low field to a minimum. For most applications, however, the single Mumetal shield is entirely adequate and to be recommended.

Both Nicoloi and Mumetal obtain their effectiveness due to the correct selection of alloys on one hand, and the process of annealing so as to relieve stresses and provide the best possible molecular structure for effective shielding, on the other.

Magnetic metal shields can be furnished to meet the most stringent requirements and match the color of the equipment incorporating such shields. Due to the high alloy content neither Nicoloi or Mumetal is subject to corrosion and, in general, it is recommended that a zinc chromate primer and a high heat lacquer be used in finishing the shields. Plating is generally avoided due to the possibility that the shields might become magnetized in the plating process which necessarily is done after annealing. Care is used in the selection of materials used in conjunction with the shields for such purposes as brackets, supports, etc., so as to minimize many operations on the shields after annealing.

Cold rolled or stainless steel brackets are recommended as it is impractical to use brass which would melt under the high annealing temperature. Tube clamps must necessarily be made of spring metal which would lose its temper during annealing. In order to avoid this clamps are mounted on the shields after treatment by means of spun rivets so as to avoid any shock to the shield.

Shields and bezels have been designed to meet the stringent requirements of military, laboratory and industrial uses and still provide units which are economical and can be assembled into the complete equipment without complexity. Our standard shields and bezels are arranged to support the cathode ray tube from the front panel without addition of complicated supports and brackets.

Standard shields and bezels for the more popular tubes are available from stock fo both production and research programs.

Many production programs, however, make desirable shields designed in conjunction with the specialized requirements of the basis apparatus. Our Custom Shield design and fabrication department is at the service of our customers for the development of magnetic metal shields for such specialized application.

Grid Dip Meters

Millen Grid Dip Meters are available to meet all various laboratory and servicing requirements.

The 90662 Industrial Grid Dip Meter hand calibrated ± 0.5% for laboratory use with a range from 225 kc. to 300 mc. incorporates features desired for both industrial and laboratory application, including three wire grounding type power cord and suitable carrying case.

The 90661 Industrial Grid Dip Meter is similar to the 90662 except for a reduced range of 1.7 to 300 mc. It likewise incorporates the three wire grounding type cord and metal carrying case.

The 90651 Standard Grid Dip Meter is a somewhat less expensive version of the grid dip meter. The ± 2.0% calibration is adequate for general usage. It is supplied without grounding lead and without carrying case. The range is 1.7 to 300 mc. Extra inductors available extends range to 220 kc.

The Millen Grid Dip Meter is a calibrated stable RF oscillator unit with a meter to read grid current. The frequency determining coil is plugged into the unit so that it may be used as a probe.

These instruments are complete with a built-in transformer type A.C. power supply and internal terminal board to provide connections for battery operation where it is desirable to use the unit on antenna measurements and other usages where A.C. power is not available. Compactness has been achieved without loss of performance or convenience of usage. The incorporation of the power supply, oscillator and probe into a single unit provides a convenient device for checking all types of circuits. The indicating instrument is a standard 2 inch instrument with an easy to read scale. The calibrated dial is a large 205° drum dial which provides seven direct reading scales, plus an additional universal scale, all with the same length and readability. Each range has its individual plug-in probe completely enclosed in a contour fitting polystyrene case for assurance of permanence of calibration as well as to prevent any possibility of mechanical damage or of unintentional contact with the components of the circuit being tested.

The Grid Dip Meters may be used as:

1. A grid Dip Oscillator
2. An Oscillating Detector
3. A Signal Generator
4. An Indicating Absorption Wavemeter

The most common usage of the Grid Dip Meter is as an oscillating frequency meter to determine the resonant frequencies of de-energized tuned circuits.

Size of Grid Dip Meter only (less probe): 7 in. x 3 3/16 in. x 3 3/8 in.

Midget Absorption Frequency Meters

Many amateurs and experimenters do not realize that one of the most useful "tools" of the commercial transmitter designer is a series of very small absorption type frequency meters. These handy instruments can be poked into small shield compartments, coil cans, corners of chassis, etc., to check harmonics; parasitics; oscillator-doubler, etc., tank tuning; and a host of other such applications. Quickly enables the design engineer to find out what is really "going on" in a circuit.

Types 90604 thru 90610 are extremely small and designed primarily for engineering laboratory use where they will be handled with reasonable care. The most useful combination being the group of four under code No. 90600 and covering the total range of from 3.0 to 140 megacycles. When purchased in sets of four under code No. 90600 a convenient carrying and storage case is included. Series 90601 are slightly larger and very much more rugged. They are further protected by a contour fitting transparent polystyrene case to protect against damage and dirt. This latter series is designed primarily for field use and are not quite as convenient for laboratory use as the 90605 thru 90608 types. All types have dials directly calibrated in frequency.

Provide firm holding under extreme shock and vibration. For capacitors, resistors, relays, wires, cables, tubing, etc. Withstand vibrations of 10 to 500 cycles and 5 to 20 G's for eight hours without resonant frequencies. Structurally designed to derive maximum grip from the component itself. Made of spring steel which flexes under heavy vibration and temperature changes, automatically increasing holding power when most needed. SPECIFICATIONS: SAE #1065 tempered carbon steel, formed in the annealed state, cadmium plated, per QQ-P-416A, Class 2 Type II, able to withstand minimum 50-hour salt spray test, per AN-QQ-S-91. SIZES: 0.175 to 1.125. FILE-O-MATIC REFERENCE: section 19, page 4, for more information.

ATLEE DIODE CLIPS FOR BOARD MOUNTING

For quick, secure mounting of solid-state diodes or similar devices. Component is quickly snapped into place, or removed by a simple twist, without disturbing soldered connections, which are made to integral lugs passing through the mounting surface. Electrical contact is positive under all conditions of shock and vibration. Special design of case-holding and lead-holding clips assures penetration of surface film or oxide, maintains lowest contact resistance. Component security is not changed by repeated insertions and withdrawals, and severe shock and vibration produce no visible shift of the component. Sizes available to accommodate diode or rectifier cases from .245″ to .270″ O.D., in spring-tempered phosphor bronze. Supplied separately in bulk for attachment by eyelets or rivets, or ready mounted in strips.

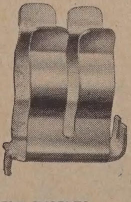
This new ATLEE development for longer tube life and greater equipment reliability provides twice as much tube contact as other style inserts. Making almost 100% contact with both tube and shield, it assures quick, positive heat dissipation from nearly all the tube surface. It also acts as a tube cushion, reducing microphonics. Easily installed in any TS or TR shield. SPECIFICATIONS: heat treated beryllium copper .002″ thick per QQ-C-553; black matte finish, withstands 50-hour salt spray test; sold in strips of desired length, or in coils by the running foot; standard widths— .75″, .86″, 1″, 1.2″, 1.5″ —other widths on request.

ATLEE TRANSISTOR CLIPS and HEAT SINKS



Available for all types and sizes of transistors. Can be provided coated with Durafilm to provide 500 V.D.C. insulation. Cadmium plated spring steel or silver plated beryllium copper alloy #25, for horizontal or vertical mounting. Silver plated beryllium copper alloy #25 with no-twist lug or solder lug. The MS line of Cannon Plugs is designed to meet Military Specification MIL-C-5015...the military specification covering electrical connectors. Until recently this line was designated as the "AN" line. The complete MS plug consists of two mating units...a plug assembly and receptacle assembly.

MS plugs were designed originally for aircraft but are now used widely in other fields. These plugs, although designed and approved under military specification for use by the armed forces, are ideal for commercial and industrial applications where the same quality and dependability are desired. Industry in general has appreciated the relatively low costs, uniform quality and interchangeability as prescribed in the MIL Spec.

MS plugs are available with from 1 to 100 contacts in 15 different shell diameters ranging from .250 to 2.550 inches. Each plug meets or surpasses the latest Specification MIL-C-5015. Each insert arrangement is available with pin or socket contacts, and will mate with the MS type having the same size and layout.

Shells are high grade aluminum alloy, lightweight and non-magnetic. All metal parts other than contacts are cadmium plated with a chromate conversion finish in dull olive drab.

Contacts are made of the best conductive material commensurate with strength. Socket contacts are full-floating, have a closed entry construction to avoid distortion, and have beryllium copper springs with excellent fatigue properties.

CANNON PLUGS

MS-E AND MS-R PLUG SERIES

MS-E (formerly called AN-E) and the new MS-R plugs are designed to operate in extreme environmental conditions...such as moisture condensation, corona formations, flashover, and vibration. This environmental sealing is accomplished with a resilient grommet at the rear of the insulator which has internal restrictions in a wire cavity acting like "O" rings around the wire. Insulators are made of resilient material to prevent damage from vibration. Resilient insulators and grommets provide a plug completely sealed from cable to cable, through the mated plugs.

MS-E Cannon Plugs are available in two types: Series ME with external cable clamp, and Series CT with shortened endbells and internal clamping action.

The MS-R Cannon Plugs are identical to the MS-E Series CT. The only difference is the addition of an "O" ring seal about the 3106 and 3108 plug barrels which supplements the interfacial seal.

The shells, endbells, and coupling nuts are of aluminum alloy. They are cadmium plated and converted by chromate treatment to an olive drab finish as required by MIL-C-5015. Insulators and grommets are of a lightweight resilient polychloroprene.

The pin and closed entry socket contacts are machined from copper alloys of high conductivity, and are silver plated.

MORPHO is the trade name of the new Cannon Plug Series MH. MORPHO represents a new concept in the art of plug design and application. A single style hermaphrodite contact is used for both plug and receptacle. The contacts are crimp-type to eliminate soldering. After crimping, the contacts are snapped into the insulator.

Hermaphrodite features are also embodied in the insulators. A single insulator is used for either the plug or the receptacle. Each insulator will accommodate up to 12 contacts. Insulators are designed in modular form so that they may be arranged to provide numerous alternate positions.

Low engagement and disengagement forces of MORPHO will be of special interest to users requiring high density layouts.

Here are some major features of the MORPHO plug:

CONTACTS

MORPHO plugs use a single style of snap-in removable crimp contact. There is no pin and socket contact of the conventional type. Instead, one contact is used for both the plug and receptacle. Contacts are designed for crimping wire sizes #20 through #27.

Contact material is a fine grain alloy of phosphor bronze. Standard contact plating is Speculum.

INSULATORS

Only one insulator is required for either the plug or receptacle. By reversing one or two identical insulators, they will mate. This is because of the hermaphrodite design of the insulator.

Each insulator module will accommodate up to 12 contacts. Contacts are completely protected within the insulator when installed.

Insulator and shell material is cellulose acetate, series XFB. Cellulose acetate has excellent characteristics in the areas of impact strength, tensile strength, and deformation under load. In addition, it is classed as self-extinguishing by Underwriters' Laboratories.

CANNON PLUGS

STANDARD K AND RK PLUG SERIES

The Standard K Series of Cannon Plugs was the first complete plug series designed (in the late 30's) as airborne equipment. They are lightweight, rugged and durable, and are used extensively in many fields outside of the aviation industry.

The principal difference between MS and K types is found in the coupling thread...the K line uses acme thread and the MS line uses unified screw threads.

While K and RK are related fittings, their differences prevent mating of a K type with the RK type. Essentially the RK is a reverse coupling version of a standard K. Because of this, different insert housings and coupling means are employed, prohibiting interconnection of the two types.

Shell parts are aluminum alloy with standard cadmium finish. Contacts are brass, silver-plated, and are machined from brass rod, with tinned solder pots.

K and RK plugs are available in 7 basic shell types having 8 insert sizes, totalling more than 220 arrangements with a variety of amperage and voltage capacities. They are available with from 1 to 110 contacts in eight size diameters ranging in size from 5/8 to 2-1/4 inches.

MC SUBMINIATURE PLUG SERIES

MC Subminiature Cannon Plugs are small, cylindrical, sealed plugs of exceptional sturdy construction. These plugs have been designed to withstand moderately severe handling and environmental conditions, and incorporate a shell which has maximum strength within its volume limits. Sealing is accomplished by interfacial compression of the resilient insert, the latter affording a high degree of vibration resistance at the same time. The strong coupling nuts utilize a rugged special Acme thread to permit fast, simple engagement and disengagement.

GOLDEN-D/D SUBMINIATURE

D Subminiature plugs are small, lightweight, rectangular plugs in 5 sizes, with 9, 15, 25, 37, or 50 gold-plated contacts. These compact plugs feature steel or brass shells with gold chromate over cadmium finish, and Zytel or Diall insulators. They will withstand a test voltage (60 cps ac rms) of 1300 volts for one minute with no evidence of breakdown. D Subminiatures are available with contact terminations for coaxial cables and taper pins. Solderless, crimp-type, snap-in contacts are supplied in addition to standard solder cup styles.

The GOLDEN-D is an addition to the D Subminiature line. It supplements the standard "D" and is designed for more critical applications. The GOLDEN-D is dimensionally and physically interchangeable with the standard D with the exception of the solder pot and rear insulator extensions, which are slightly longer. The added length provides better contact stability and increased insulator strength. All-new monobloc insulators are incorporated in the GOLDEN-D for increased strength in miniature size. Insert material is forest green Diallyl-phthalate. Miniature socket contacts are closed-entry, providing protection against damage by oversized test probes. Pins and sockets are gold plated for high reliability. Coaxial contacts, except grounded coax, are designed to permit them to be snapped-in to the insulator after they have been secured to the cables. Contacts are also removable. Shell finish on the new GOLDEN-D is golden iridite over cadmium plate. Four GOLDEN-D types are available:

GOLDEN-D with closed-entry contacts
GOLDEN-D with snap-in ungrounded coaxial contacts
GOLDEN-D with grounded coaxial contacts
GOLDEN-D with high voltage contacts

Coaxial contacts are available for both the Standard D Subminiature and GOLDEN-D Series. Accessories for D Subminiature plugs include: Straight Junction Shells, Straight Clamp Type Junction Shells, 90° Junction Shells, Guide Pin Plates, and Floating Mounts.

GSO2 Hermetically Sealed Plugs are used wherever instruments are required to be hermetically sealed within a partial vacuum, inert gas, or a constant or controlled pressure.

GSO2 plugs are made with standard MS insert layouts, and with a variety of mounting flanges. These plugs are also available with high-voltage, high-current, and coaxial contacts.

Shells and pin contacts are of steel. Vitreous insulation is used in a manner which creates an hermetic seal and prevents a leakage rate in excess of one micron cubic foot per hour at a pressure differential of 1 atmosphere as tested on a mass spectrometer.

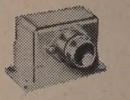
JUNCTION SHELL



DPD-34CL-5/8 AN
JUNCTION SHELL

DPD plugs are designed for unit plug-in applications. They are distinguished from other Cannon lines by their rectangular shape and they provide maximum space utilization on rack/panel chassis equipment. One half of the plug is mounted to a radio rack or panel, for instance, and the other half is mounted to the instrument. By this means instruments can be easily removed for inspection and repair.

The DPD is the standard of the DP (Dual Panel) line and accommodates the widest range of contacts in both style and number. They are available with from 2 to 78 contacts in 22 basic insert arrangements, plus variations. A variety of endbells for junction shells are available. The shell is chamfered to facilitate engagement.

Shell material is die-cast aluminum alloy with cadmium plate finish. Insulation is molded melamine or fabricated phenolic. Inserts are retained by insert retaining clips. Retaining clip is metallic and will ground coaxial contacts unless insulation is specified.

DPA AND DPX MINIATURE PLUGS

In response to a need for a small rectangular rack/panel plug of great strength, Cannon Electric has designed two rugged miniatures, the DPA and DPX. They are similar to the DPD plugs but occupy approximately 35% (for the DPA) and 46% (for the DPX) less area for rack/panel chassis mounting.

The DPA utilizes a one-piece shell construction. The elimination of conventional insert-retaining screws provides a maximum utilization of insert area and results in a new ease of assembly. The insert is held in place by a retaining clip at the rear of the shell.

The DPX has a two-piece split shell construction. Inserts are held in place by means of internal grooves molded into the shell. These grooves accommodate raised shoulders on the insulator, completely embracing and locking the insert assembly. An external assembly ring slips over the shell halves to hold them together. The DPX can be completely assembled without tools.

The standard insert material for the DPA and DPX is melamine. DPA insert layouts accommodate 5 amp and small coaxial contacts. DPX insert layouts accommodate 5 amp, 10 amp, and small coaxial contacts.

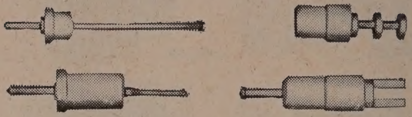
SUBMINIATURE **KWIK-TERM** TERMINALS



Cannon Kwik-Term subminiature terminals are now available for use in conjunction with Radar, TV, HF, UHF, VHF, Microwave, and other "sophisticated" circuits.

Kwik-Terms are easily installed into an electronic chassis by simply pressing them into a pre-punched or pre-drilled hole. The TEFLON material of the insulator when pressed into a slightly smaller mounting hole tends to relieve its own stress. This causes a rivet-type action in the TEFLON which anchors and seals the terminal securely and permanently to the chassis. No nuts, washers, staking or soldering is required.

The following features illustrate the advantages of Cannon Kwik-Terms:

- Ease of assembly even in crowded installations
- Installation in seconds
- Saves weight and space—eliminates terminal boards
- Rugged—Kwik-Terms resist vibration and shock
- Wide variety of terminal configurations and pin lengths
- Kwik-Terms are heat resistant for soldering
- Wide variety of finishes, colors, and soldering lugs can be supplied to order

ALRF PLUG SERIES

This new Cannon Plug Series of Aluminum RF Coaxial Plugs and Adapters utilize aluminum as the major portion of material in order to reduce weight. Included in this new series are aluminum variations of the standard N plugs and adapters for Foamflex and Raytherm rigid cables.

The new ALN line is 35% lighter than standard N types. Their electrical performance equals or betters that of the standard N. They have a black anodic finish for maximum corrosion resistance.

UHF CRIMPEE SERIES

A recent addition to the RF line is the inexpensive, completely solderless UHF "Crimpee" Plug for such applications as mobile communication equipment, ham radio sets, and television master antenna distribution systems. This plug uses a simplified crimping method for rapid assembly. It is to be used as a replacement for standard PL-259 plugs, and the pin contacts are designed to fit standard 50-239 sockets. These constant-impedance plugs mate with the standard UHF Series of RF receptacles. An inexpensive crimp tool CCTUHF-1 is available.

"400" SERIES PLUGS AND SOCKETS

(Formerly "Heavy Duty")

General Specifications

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are ¼" wide by 1/16" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

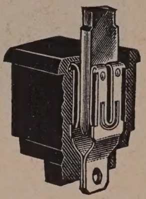
"2400" SERIES PLUGS AND SOCKETS

The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.



This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass ¼"x$\frac{1}{16}$", cadmium plated.

Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.

Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402—⅜"
2404—$\frac{7}{16}$"
2406—$\frac{7}{16}$"
2408—$\frac{9}{16}$"
2410—$\frac{9}{16}$"
2412—⅝"

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

CINCH-JONES SALES • DIVISION OF CINCH MANUFACTURING COMPANY

"500" SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}''$ x $\frac{3}{32}''$.

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from ½" diameter and 1¼" diameter in steps of ⅛", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

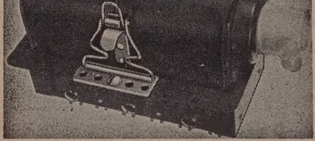
LOCKS FOR 500 SERIES PLUGS AND SOCKETS



No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

E-Z-HOOKs

A Revolutionary Concept in Test Connectors!

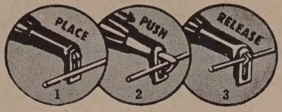
MODERN DESIGN ASSURES SAFER — FASTER — MORE POSITIVE CONNECTIONS

By utilizing a HOOK (the handiest connector ever devised) and an insulated FOOT (to hold it firmly in place) E-Z-HOOKs provide quick, easy connections and eliminate costly delays, shorts and intermittents. POSITIVE GRIP — NO SLIP. E-Z-HOOKs will save many hours in engineering design, bread-boarding, trouble shooting and test set-ups.

HERE'S HOW THE E-Z-HOOK WORKS:

TO ATTACH:

1. Simply place the "foot" on the Test Spot.
2. Exert a slight forward pressure.
3. Release — and you have a vise-like grip that won't slip.



TO RELEASE: Just push slightly and turn.

USE THEM TIME AFTER TIME FOR POSITIVE GRIP — NO SLIP

Every E-Z-HOOK product is fully insulated. A Nylon sliding safety shield provides maximum protection against adjacent shorts and allows positive connections anywhere, even on flat, large or irregular test spots.

EASIEST OF ALL CONNECTORS TO USE: E-Z-HOOKs are self-adjusting for quick, positive connections. Their small, compact design, and sliding action, permits reaching crowded spots — even deep in a chassis. So the hands remain in the open, safe from shocks. Made of durable stainless steel and Nylon* — E-Z-HOOKs are built to last and are fully guaranteed to give satisfactory service. Always use E-Z-HOOKs when you need safe — fast — positive connections.

E-Z-HOOK CLIP TEST CONNECTORS

Specially designed for jumper leads, ground connectors and leads on all types of equipment. Assembly is quick and easy.

E-Z-HOOK Clip

Actual Size

To remove body insulator, simply squeeze at A & B (Fig. 1). Pull firmly on insulator C. This will remove cover from connector (Fig. 2).

Now a positive, trouble-free solder connection can be made to the lead — indicated in Fig. 3. The joint is wrapped as in Fig. 3 — and iron or dip soldered. This method of attaching the lead relieves strain — increasing test lead life. To reassemble, simply slide the two units together. Colors: red, black, blue, green, orange and yellow.

E-Z-HOOK CUSTOM TEST PROBE

Designed with a built-in terminal board for ease in making your own special test probe assemblies.

⅔ Size

The positive grip, plus the sliding safety shield make this ideal for use on Electronic Test Leads. It is fast, efficient and safe. The built-in terminal board with special mounting lugs, makes it easy to make your own special test probe assemblies in minutes. A tenite* screw-on cover protects components and gives easy access to the terminal board. It is ideal for use with scopes, volt-ohm-meters, signal tracers, signal generators, substitution boxes, etc. It saves money in experimenting and servicing because it makes testing faster, easier and safer. Comes in red, green, black, blue, silver and orange.

E-Z-HOOK SUB CONNECTOR

Designed for temporary lead connections, substitute checks, experimental hookups, etc.

Actual Size

By making connections without soldering you save time, save wear and tear, eliminate solder tacking and reduce salvage. When this dual connector is utilized, burnt insulation, lead twisting and frayed wires are eliminated. Parts and circuitry stay clean and new-looking and Test setups are made easier and faster. Colors: red, black, blue, green, orange and yellow for easy lead identification.

E-Z-HOOK TIP ADAPTER

Actual Size

Designed to convert test prods to self-holding connectors.

Because the tip ADAPTER makes a test prod self-holding, hands are freed. Also, the sliding safety shield permits getting in close without shorting. The tip slips on or off easily, and has a special spring chuck (Fig. 5) to hold it firmly on the prod. Available in red, black, blue, green, orange and yellow.

MICROPHONE CONNECTORS

L-T has developed a new molded connector which is interchangeable with the present type now on the market. Molded grip with the cable molded directly onto the polished nickel plated brass connector. BOTH the conductor AND shield are soldered to the connector prior to molding, insuring noise-free operation. Heavy duty co-axial shielded cable, low loss, with a nominal capacitance of approximately 25 mmf/ft. For use with microphones, pre-amps, test equipment, VTVM, oscilloscopes, recorders, custom Hi-Fi installations or wherever a standard microphone connector is used. The coupling ring may be screwed back to convert connector from female to male type. Molded in gray to match the silver-gray cable.

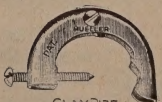
GROUND CLAMP



CLAMPIPE
No. 58

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

The best ground clamp value on the market. Applicable to pipe ⅜″ to 1⅜″ outside diameter.

The PECO Test Socket Adapters are ideal for making measurements of voltage, resistance, and video from the base of the picture tube. The test socket adapter is inserted between the CR Tube base and its socket. This completes the circuit and makes all connections readily accessible. Measurements can be made without tracing circuit wiring to test points below the chassis, thereby saving valuable time and increasing efficiency in trouble shooting.

TRANSISTOR SOCKET
